For those who are familiar with the first edition, it will be convenient to have some indication of where the main changes lie. Chapter one has been largely rewritten to give an outline of current approaches to a model of comprehension of spoken language. Chapter two has a new initial section but otherwise remains as it was. Chapter three incorporates a new section on "pause" and how this interacts with rhythm, and rather more on the function of stress. Chapter four has an extended initial section but otherwise remains largely as it was. Chapter five on intonation contains several sections which have been rewritten to varying extents. Chapter six of the first edition has disappeared: in 1977, very little work had been published on "fillers" and it seemed worthwhile incorporating a chapter that sat rather oddly with the phonetic/phonological interests of the rest of the book. Not that there is a great industry of descriptions of the forms and functions of these and similar phenomena there seems no reason to retain this early but admittedly primitive account. The chapter on "paralinguistic vocal features", now chapter six, has some rewriting in the early part but considerable rewriting in the last sections. The final chapter on "teaching listening comprehension" has grown greatly in length. It still incorporates some material from the original chapter but most of it is completely rewritten.

Integrating musical activities in the elementary school classroom can assist in effectively teaching and engaging students in Language Arts, Science, Math, and Social Studies, while also boosting mental, emotional and social development. However, many elementary education majors fear they lack the needed musical skills to use music successfully. Future elementary school teachers need usable, practical musical strategies to easily infuse into their curriculum. Written for both current and future teachers with little or no previous experience in music, *Using Music to Enhance Student Learning, Second Edition* offers strategies that are not heavily dependent on musical skills. While many textbooks are devoted to teaching music theory skills, this textbook is dedicated to pedagogy – the actual teaching of music – particularly in those schools without a separate music class in their curriculum. The ultimate goal is for future teachers to provide their elementary school classes with engaging learning experiences. These learning experiences are clearly presented to enable children to acquire knowledge in all subject areas within a joyful, creative environment rich with music activities. New to the second edition are the animated listening maps, more audio tracks, a new guitar unit, expanded coverage in the recorder unit, a connection with visual art and music, expanded activities in American history and math, and updated research and statistics. SPECIAL FEATURES Animated "Listening Maps" help listeners focus on music selections through clear visual representations of sound. Group Activities reinforce the social aspects of music-making, as well as the benefits of collaborative teaching and learning. A thorough integration of music in the curriculum establishes that music is essential in a child's development, and that the incorporation of music will enhance all other subjects/activities in the classroom. Learning Aids include "Tantalizing Tidbits of Research," which provide the justifications for why these activities are important, as well as "Teaching Tips," and "Thinking It Through" activities. Current Trends in the Development and Teaching of the four Language Skills builds connections from theory in the four language skills to instructional practices. It comprises twenty-one chapters that are grouped in five sections. The first section includes an introductory chapter which presents a communicative competence framework developed by the editors in order to highlight the key role the four skills play in language learning and teaching. The next four sections each represent a language skill: Section II is devoted to listening, Section III to speaking, Section IV to reading and Section V to writing. In order to provide an extensive treatment of each of the four skills, each section starts with a theoretical chapter which briefly illustrates advances in the understanding of how each skill is likely to be learned and taught, followed by four didactically oriented chapters authored by leading international specialists. These pedagogical chapters deal specifically with four key topics: 1) areas of research that influence the teaching of a particular skill; 2) an overview of strategies or techniques necessary for developing a particular skill; 3) an approach to the academic orientation of a particular skill, and 4) unique aspects of teaching each skill. Moreover, all chapters incorporate two common sections: pre-reading questions at the beginning of the chapter in order to stimulate readers' interest in its content, and a section entitled suggested activities at the end of the chapter in order to allow readers put the ideas and concepts presented into practice. The accessible style and practical focus of the volume make it an ideal tool for teachers, teacher trainers, and teacher trainees who are involved in teaching the four language skills in a second or foreign language context.
