The book presents comparative analyses of five elementary mathematics curriculum programs used in the U.S. from three different perspectives: the mathematical emphasis, the pedagogical approaches, and how authors communicate with teachers. These perspectives comprise a framework for examining what curriculum materials are comprised of, what is involved in reading and interpreting them, and how curriculum authors can and do support teachers in this process. Although the focus of the analysis is 5 programs used at a particular point in time, this framework extends beyond these specific programs and illuminates the complexity of curriculum materials and their role in teaching in general. Our analysis of the mathematical emphasis considers how the mathematics content is presented in each program, in terms of sequencing, the nature of mathematical tasks (cognitive demand and ongoing practice), and the way representations are used. Our analysis of the pedagogical approach examines explicit and implicit messages about how students should interact with mathematics, one another, the teacher, and the textbook around these mathematical ideas, as well as the role of the teacher. In order to examine how curriculum authors support teachers, we analyze how they communicate with teachers and what they communicate about, including the underlying

mathematics, noticing student thinking, and rationale for design elements. The volume includes a chapter on curriculum design decisions based on interviews with curriculum authors.

Roadmap to 4th Grade Math, Ohio Edition
The Princeton Review

"Prepares students for the Florida comprehensive assessment test (FCAT)"--Cover.

Math on target was developed to "provide students with a systematic way to look at word problems. By using the thinking maps provided, students will develop the ability to explain their problem-solving strategies and take their thinking to a deeper level." It also is "to provide teachers with problems linked to national standards in three assessment formats: multiple-choice, short answer, and extended response. These standards include number sense, measurement, geometry, algebra, [and] data probability."--P. 1.

Applying the Standards: Math for kindergarten offers 64 pages of targeted math practice. It is aligned with the Common Core State Standards and includes a problem-solving rubric, a standards alignment chart, and standard-specific pages of math problems and performance tasks. Kindergartners will be able to prove deep understanding of topics that range from

numbers and counting, simple addition and subtraction, and measurement basics, to simple geometry. The Applying the Standards: Math series emphasizes higher-level thinking by requiring students to complete performance tasks to prove understanding of each standard. This is a series of six 64-page books for students in kindergarten to grade 5. All grade-level math skills are covered, and a culminating reflection question for each performance task engages students in the standards of mathematical practice. The Common Core State Standards and depth of understanding are emphasized throughout the series.

The Math on Target book provides a systematic approach to working through any math problem. It includes model lessons for multiple choice, short answer, and extended response questions. It also provides thinking maps to improve problem solving skills and is based on five national standards: Number Sense, Measurement, Geometry, Algebra, and Data and Probability.
