Ancient Sanskrit text with English translation on trees and plants.

PREFACE. THE Author of this very practical treatise on Scotch Loch - Fishing desires clearly that it may be of use to all who had it. He does not pretend to have written anything new, but to have attempted to put what he has to say in as readable a form as possible. Everything in the way of the history and habits of fish has been studiously avoided, and technicalities have been used as sparingly as possible. The writing of this book has afforded him pleasure in his leisure moments, and that pleasure would be much increased if he knew that the perusal of it would create any bond of sympathy between himself and the angling community in general. This section is interleaved with blank sheets for the readers notes. The Author need hardly say that any suggestions addressed to the case of the publishers, will meet with consideration in a future edition. We do not pretend to write or enlarge upon a new subject. Much has been said and written-and well said and written too on the art of fishing but loch-fishing has been rather looked upon as a second-rate performance, and to dispel this idea is one of the objects for which this present treatise has been written. Far be it from us to say anything against fishing, lawfully practised in any form but many pent

up in our large towns will bear us out when we say that, on the whole, a days loch-fishing is the most convenient. One great matter is, that the loch-fisher is dependent on nothing but enough wind to curl the water, -and on a large loch it is very seldom that a dead calm prevails all day, -and can make his arrangements for a day, weeks beforehand whereas the stream-fisher is dependent for a good take on the state of the water and however pleasant and easy it may be for one living near the banks of a good trout stream or river, it is quite another matter to arrange for a days river-fishing, if one is looking forward to a holiday at a date some weeks ahead. Providence may favour the expectant angler with a good day, and the water in order but experience has taught most of us that the good days are in the minority, and that, as is the case with our rapid running streams, -such as many of our northern streams are, -the water is either too large or too small, unless, as previously remarked, you live near at hand, and can catch it at its best. A common belief in regard to loch-fishing is, that the tyro and the experienced angler have nearly the same chance in fishing, -the one from the stern and the other from the bow of the same boat. Of all the absurd beliefs as to loch-fishing, this is one of the most absurd. Try it. Give the tyro either end of the boat he likes give him a cast of all flies he may fancy, or even a cast similar to those which a crack may be using and if he catches one for every

three the other has, he may consider himself very lucky. Of course there are lochs where the fish are not abundant, and a beginner may come across as many as an older fisher but we speak of lochs where there are fish to be caught, and where each has a fair chance. Again, it is said that the boatman has as much to do with catching trout in a loch as the angler. Well, we don't deny that. In an untried loch it is necessary to have the guidance of a good boatman but the same argument holds good as to stream-fishing...

This new edition of the popular Pharmacology case studies for nurse prescribers has been thoroughly revised in the light of the latest research and guidance from NICE, the British National Formulary (BNF), the Royal Pharmaceutical Society, the Nursing and Midwifery Council and the Royal College of Nursing. While the first edition was aimed at students undertaking the non-medical prescribing modules, this updated text has broadened its scope and is relevant to all trainee

and qualified nurse prescribers. There are new and additional chapters on pregnancy and breastfeeding, sexual health and contraception, and prescribing for frailty syndrome in the elderly. The latest developments in pharmacology (such as the emergence of biosimilar drugs) are included in the text; and all the chapters from the first edition have been revised and updated by expert healthcare practitioners. Meanwhile, the practical approach and helpful features that made the first edition so popular remain unchanged. The authors offer a basic introduction to pharmacological concepts, embedded in specific conditions, through case studies and self-assessment questions. By utilising a case study approach, they enable the reader to link pharmacological concepts with clinical practice. Reading this book, and carrying out the numerous self-assessment activities, will give the reader an appreciation of the value of having a sound pharmacological knowledge base in order to deliver safe practice, effective prescribing and improved patient care. Praise for the first edition: 'A useful and practical accompaniment for those studying nurse prescribing, this textbook is also a valuable resource for practitioners qualified in this extended role and those who prescribe and administer medications daily.' Valerie McGurk, Practice Development Nurse, Nursing Management 'This book is a comprehensive collection of case studies on a number of conditions, from heart failure to eye

problems.’ Lynda Gibbons, Registered Advanced Nurse Practitioner, Emergency Nurse

This is a collection of articles exploring the issue of power in relation to organizations. It asserts that any attempt to understand the large literature on power must extend beyond the confines of organization and management theory. The argument underlying the volume is that broad exploration is essential because management studies of power have been for the most part, severely constrained, tending to view power from a functionalist perspective. In so doing issues of how power becomes embedded in existing organizational structures, cultures, practices, rules and regulations have been ignored.

"Rapid appraisal is a less structured data collection method aimed at supplying needed information in a timely and cost-effective manner. This volume outlines five rapid data collection methods - key informant interviews, focus group discussions, group ... See More + interviews, structured observation, and informal surveys. Each of these methods has been used by exponents of rapid appraisal. Case studies are used to illustrate the use of these methods in development settings especially in evaluation of development projects and programs. The authors show that rapid appraisals can be a complement to standard social research methods which are not often used to meet the pressing information needs of decision-makers in development."--World Bank.

In 1964 at the World's Fair in New York City one room was dedicated solely to mathematics. The display included a very attractive and informative mural, about 13 feet long, sponsored by one of the largest computer manufacturing companies and presenting a brief survey of the history of mathematics. Entitled, "Men of Modern Mathematics," it gives an outline of the development of that science from approximately 1000 B. C. to the year of the exhibition. The first centuries of this time span are illustrated by pictures from the history of art and, in particular, architecture; the period since 1500 is illuminated by portraits of mathematicians, including brief descriptions of their lives and professional achievements. Close to eighty portraits are crowded into a space of about fourteen square feet; among them, only one is of a woman. Her face—mature, intelligent, neither pretty nor handsome—may suggest her love of science. Her face, however, does not suggest her creative gift, but certainly reveals a likeable personality and a genuine kindness of heart. It is the portrait of Emmy Noether (1882 - 1935),

surrounded by the likenesses of such famous men as Joseph Liouville (1809-1882), Georg Cantor (1845-1918), and David Hilbert (1862 -1943). It is accompanied by the following text: Emmy Noether, daughter of the mathematician Max, was often called "Der Noether," as if she were a man.

* Our summary is short, simple and pragmatic. It allows you to have the essential ideas of a big book in less than 30 minutes. *By reading this summary, you will address the major scientific questions of life and the Universe. It will help you understand where you come from and what planet you live on. *You will also discover that : The Earth is only a tiny part of the Universe. There are many dangers threatening us, both underground and in our solar system. Our ancestors, the Homo Sapiens hominids, did not reveal all their secrets. The world of the infinitely small is as important as the world of the infinitely large. *To begin with, it is necessary to know that we owe our existence only to a hazardous assembly of atoms. Our life is made up of these extraordinary atomic mixtures. This idea brings us to this first observation: our life is hanging by a thread, just like our survival. Indeed, the longevity of the human species is as uncertain as these assemblages of atoms. *Buy now the summary of this book for the modest price of a cup of coffee!

* Our summary is short, simple and pragmatic. It allows you to have the essential ideas of a big book in less than 30 minutes. As you read this summary, you will learn that success is not synonymous with specialization in a single field, but with building a diverse range of knowledge. You will also learn : that specialization is essential in some trades, but that it has its limits; that early specialization prevents open-mindedness; that generalization makes the transfer of knowledge in any field possible; that it is recommended to generalize in order to be able to specialize later; that mistakes must be part of the path to success. Specialization in the world of work, sports or the arts has become the norm. Competition is fierce and it is common to seek to stand out from others through specific

knowledge or techniques. To do so, it is recommended that you begin your specialization as early as possible: the more time you spend practicing in a particular field, the more successful you will be. Because of this pressure, you are probably afraid to change your professional path completely. However, generalizing your knowledge could be extremely beneficial! Why are generalists increasingly important in today's world? *Buy now the summary of this book for the modest price of a cup of coffee!

This book offers a conceptual and practical guide to the systematic review

process and its application to sport, exercise, and physical activity research. It begins by describing what systematic reviews are and why they assist scientists and practitioners. Providing step-by-step instructions the author leads readers through the process, including generation of suitable review questions; development and implementation of search strategies; data extraction and analysis; theoretical interpretation; and result dissemination. Conducting Systematic Reviews in Sport, Exercise, and Physical Activity clarifies several common misunderstandings including the difference between qualitative systematic reviews and meta-analyses . Each chapter begins with a set of learning objectives focused on practical application, illustrated with examples from reviews published within the sport, exercise, and physical activity fields. Once a reader has completed all the learning activities along the way, they will have designed a systematic review and have written a protocol ready for registration. The book ends with a collection of advice from internationally regarded scientists with substantial experience in systematic reviews.

As result of progress, endoscopy has become more complex, using more sophisticated devices and has claimed a special form. In this moment, the gastroenterologist performing endoscopy has to be an expert in macroscopic view of the lesions in the gut, with good skills for using standard endoscopes,

with good experience in ultrasound (for performing endoscopic ultrasound), with pathology experience for confocal examination. It is compulsory to get experience and to have patience and attention for the follow-up of thousands of images transmitted during capsule endoscopy or to have knowledge in physics necessary for autofluorescence imaging endoscopy. Therefore, the idea of an endoscopist has changed. Examinations mentioned need a special formation, a superior level of instruction, accessible to those who have already gained enough experience in basic diagnostic endoscopy. This is the reason for what these new issues of endoscopy are presented in this book of New techniques in Gastrointestinal Endoscopy.

HVAC - Heating, Ventilation and Air conditioning systems and applications are used everyday by a substantial population in developed and developing countries. Apparently most of the users are not aware of the types and the concepts of these systems. Perhaps many of them feel that there is no need to understand the concepts and applications. However, students/ Technicians and others who would like to learn and deal with the systems need an introductory level book, that would initiate them into this field. This book is planned to include fundamental concepts of HVAC systems and hopefully meet the expectations of students aspiring to learn in general about these systems.
