This story is about the amazing journey of an extraordinary puppy. From a pound dog shelter to a new chapter of her life with us. She was the most talented pup I have ever met in my whole life! She was gentle and never barked at any person she faced. Instead, she sniffed as her usual greeting to anyone. She could learn new stuff within a day. She played soccer with a basketball by herself and caught a baby chick robin and then let it go. She did all kinds of tricks that made us laugh and brighten our day. One of her favorite games was to have someone fly a Frisbee. Mesha would then catch up the Frisbee and let it bounce onto her nose and then catch it again. She was our clown in her own ways. She was the best comforter for my daughter's heartaches and/or bad days throughout her entire teenage life to adulthood, and also to us during my father-in-law's passing. She was the best scarecrow to scare the birds out from my garden. Every person she met would love her instantly. She was full of love in her life. She was the most loving creature of God.

This handbook reveals those aspects of hacking least understood by network administrators. It analyzes subjects through a hacking/security dichotomy that details hacking maneuvers and defenses in the same context. Chapters are organized around specific components and tasks, providing theoretical background that prepares network defenders for the always-changing tools and techniques of intruders. Part I introduces programming, protocol, and attack concepts. Part II addresses subject areas (protocols, services, technologies, etc.) that may be vulnerable. Part III details consolidation activities that hackers may use following penetration.

This edition of The Year's Best Science Fiction collects twenty-five of the finest works of speculative fiction to see print in 1990, stories from the genre's every edge, and from its heart. Among the many marvels are tales from the field's most accomplished artists: Ursula K. Le Guin's "The Shobies' Story" returns to the Hainish worlds with a reality-defining story, while Joe Haldeman's "The Hemmingway Hoax" embarks from our world on a time-defying trip through other possibilities. Kate Wilhelm, Michael Moorcock, Robert Silverberg, and John Brunner demonstrate too with their stories why they remain among the most popular

science fiction writers of all time. With the closing of a decade and cyberpunk virtually becoming reality, many of the leading writers of the eighties have begun to bring new insight and vision to their fiction: Bruce Sterling examines a classic clash of cultures in "We See Things Differently," and James Patrick Kelly's "Mr. Boy" presents a hard-edged story about the guts of growing up. Lewis Shiner's "White City" and Connie Willis's "Cibola" both seek peace--of sorts--amid spectacle, and works by Nancy Kress, Lucius Shepard and Robert Frazier, Pat Murphy, and John Kessel also dazzle and amaze. Among the many other stories in this volume are powerhouse piece by Terry Bisson, Molly Gloss, Ian McDonald, Charles Sheffield, Alexander Jablokov, and Dafydd ab Hugh, as well as towering new mindscapes from young talents such as Jonathan Lethem, Ian R. MacLeod, Greg Egan and Ted Chiang. A wonderful tour through possible, probable, and virtual realities, The Year's Best Science Fiction is an ideal assemblage of the year's short fiction. This volume is essential to anyone who reads sf. "A virtually indispensable series."--Kirkus Reviews

Crime detection has gone to the dogs and squirrels are being busted for espionage. If you've never wondered about the new direction of 'intelligence-led policing' in our society, now is the time to start. It was a chance encounter with a police sniffer-dog that drew criminal lawyer Amber Marks into the hidden world of the science of smell and its law-enforcement applications. Soon she stumbled into a wonderland of contemporary surveillance, where the spying skills of bees, dolphins and a myriad other critters were being harnessed to build a 'secure world' of bio-intelligence. From the businesses, scientists and military departments developing new smell-based surveillance technologies, to good old-fashioned police dogs, Amber discovered a secret world of security forces, where animals and scent are as important as intelligence agents and CCTV. Part polemical exploration of our burgeoning surveillance society, part humorous memoir, this intriguing book will capture your imagination and get you wondering: just who stands to benefit from all this 'security'? In the new millennium, what secrets lay beyond the far reaches of the universe? What mysteries belie the truths we once held to be self-evident? The world of science fiction has long been a porthole into the realities of tomorrow, blurring the line between life and art. Now, in The Year's Best Science Fiction: Thirty-Fourth Annual Collection, the very best SF authors explore ideas of a new world. This venerable collection brings together award-winning authors and masters of

the field. With an extensive recommended reading guide and a summation of the year in science fiction, this annual compilation has become the definitive must-read anthology for all science fiction fans and readers interested in breaking into the genre.

Anyone who has ever spent time with a dog knows that dogs love sniffing! They sniff out hidden food, dirty socks, and the visitor who comes to the door. But some dogs work with police officers, soldiers and even scientists to put their "sniffers" to work. Sniffer dogs make use of the amazing biology behind their noses to protect people from bombs, catch criminals smuggling drugs, or help researchers locate a hard to find snail in a forest. A dog's nose is so sensitive that if a human could see as well as a dog could smell, we would be able to see the small letters on an eye chart from four (four!) miles away. Is it any wonder then that dogs can be trained to find missing people in piles of rubble or a certain flower blooming amongst hundreds or thousands of other smells? In Sniffer Dogs you will meet many dogs and their handlers and learn all about their jobs. Some of these dogs are raised from birth to detect blood sugar levels in their owners. Others are rescued from animal shelters and their boisterous personalities help make them excellent sniffer dogs. Featuring a balance between science and social

science, Sniffer Dogs will appeal to dog lovers and science lovers alike.
