British and American commanders first used modern special forces in support of conventional military operations during World War II. Since then, although special ops have featured prominently in popular culture and media coverage of wars, the academic study of irregular warfare has remained as elusive as the practitioners of special operations themselves. This book is the first comprehensive study of the development, application, and value of Anglo-American commando and special forces units during the Second World War. Special forces are intensively trained, specially selected military units performing unconventional and often high-risk missions. In this book, Andrew L. Hargreaves not only describes tactics and operations but also outlines the distinctions between commandos and special forces, traces their evolution during the war, explains how the Anglo-American alliance functioned in the creation and use of these units, looks at their command and control arrangements, evaluates their impact, and assesses their cost-effectiveness. The first real impetus for the creation of British specialist formations came in the desperate summer of 1940

when, having been pushed out of Europe following defeat in France and the Low Countries, Britain began to turn to irregular forces in an effort to wrest back the strategic initiative from the enemy. The development of special forces by the United States was also a direct consequence of defeat. After Pearl Harbor, Hargreaves shows, the Americans found themselves in much the same position as Britain had been in 1940: shocked, outnumbered, and conventionally defeated, they were unable to come to grips with the enemy on a large scale. By the end of the war, a variety of these units had overcome a multitude of evolutionary hurdles and made valuable contributions to practically every theater of operation. In describing how Britain and the United States worked independently and cooperatively to invent and put into practice a fundamentally new way of waging war, this book demonstrates the two nations' flexibility, adaptability, and ability to innovate during World War II.

The actual course given to all secret agents in SOE before working behind enemy lines. It includes everything you needed to know to go undercover - from documents, cover stories and how to live off the land to how to get through an interrogation. The Special Operations Executive (SOE) was a secret British World War II organisation formed in 1940 to conduct espionage, sabotage and reconnaissance in occupied Europe against the Axis powers, and to aid local

resistance movements. In late 1942, SOE was asked to increase the number of agents to aid the invasion of mainland Europe. Part of agent training was 'tradecraft' - the practical details on how to be a clandestine agent behind enemy lines - which every agent had to attend at various bases centred around Beaulieu in Hampshire. The course was a set of lectures and this book contains the actual text of those lectures which were discovered in the National Archives this year. It is not only a fascinating insight into the workings of one of the Second World Wars most famous and secretive organisations, but is also a reminder of the huge danger anyone being dropped behind enemy lines had to face. Mountains exist in almost every country in the world and almost every war has included some type of mountain operations. This pattern will not change, and soldiers will continue to fight in mountainous terrain in future conflicts. Although mountain operations have not changed, several advancements in equipment and transportation have increased the soldiers' capabilities. The helicopter now

allows access to terrain that was once unreachable or could be reached only by slow methodical climbing. Inclement weather, however, may place various restrictions on the capabilities of air assets available to a commander. The unit must then possess the necessary mountaineering skills to overcome adverse terrain to reach an objective. The U.S. Army Guide to Military Mountaineering details techniques soldiers and leaders must know to cope with mountainous terrain. These techniques are the foundation upon which the mountaineer must build. They must be applied to the various situations encountered to include river crossings, glaciers, snow-covered mountains, ice climbing, rock climbing, and urban vertical environments. The degree to which this training is applied must be varied to conform to known enemy doctrine, tactics, and actions. This guide also discusses basic and advanced techniques to include acclimatization, illness and injury, equipment, anchors, evacuation, movement on glaciers, and training.

Field Manual (FM) 3-05.130, Army Special Operations Forces Unconventional Warfare, establishes keystone doctrine for Army special operations forces (ARSOF) operations in unconventional warfare (UW). It is based on lessons learned from both historical and contemporary UW operations. It is also based on existing, long-standing Army Special Forces (SF) UW doctrine; recently developed doctrine, such as counterinsurgency (COIN); and emerging affiliated concepts, such as irregular warfare (IW). Since 11 September 2001 and the onset of the War on Terrorism (WOT), existing UW doctrinal publications have undergone intense scrutiny and timely revision. A majority of existing ARSOF manuals have incorporated recent lessons learned and updated tactics, techniques, and procedures (TTP) of immediate utility to the conduct of war. For this reason, the Army has classified most of these revised manuals. UW remains an enduring and effective means of warfighting and is recognized as a central effort in the WOT. Although the classification of existing doctrine is prudent for

Online Library Special Operations Equipment Complete Guide Army

operational security, it limits the distribution of concepts necessary for an effective joint, interagency, and multinational effort. ARSOF and other audiences require an unclassified conceptual manual useful to understanding the nature of UW and its role in the nation's application of power. This manual provides that unclassified conceptual treatment. ARSOF execute and are the functional proponent for UW under United States Special Operations Command (USSOCOM) Directive 10-1, Terms of Reference for Component Commanders, and other authorities.

Currently, there exists no authoritative interagency or joint doctrine specifically for UW—although sufficient joint doctrine does exist for general campaign design and execution of joint and Army operations. This manual is the overarching doctrinal reference that specifically addresses UW as conducted by ARSOF. Detailed TTP for UW can be found in FM 3-05.201, (S/NF) Special Forces Unconventional Warfare (U). The first chapter establishes what UW is and includes a comparison of traditional and emerging concepts with which UW is sometimes confused. Chapter 2 discusses the international environment and United States (U.S.) instruments of national power within which all military operations—including UW—occur. Chapter 3 addresses policy and doctrine that define, enable, and constrain UW. Chapter 4 outlines planning considerations for UW. The next three chapters provide a more focused operational discussion of ARSOF's three main

component disciplines: SF operations, Psychological Operations (PSYOP), and Civil Affairs operations (CAO). Chapter 8, which concerns supporting elements and activities of UW, concludes the basic manual. The appendixes contain useful supplemental information. The first seven appendixes (A-G) provide expanded and detailed information on U.S. instruments of national power within the broader context of the international environment. Appendix H is a survey of definitions and current academic considerations concerning historical and cultural concepts useful to the assessment of human environments. Appendix I provides a historical survey of UW. Appendix J contains an outline sketch of change and constancy in the definition of UW. Current doctrinal references and an expanded bibliography provide a guide for further reading and mature understanding of UW within the endeavor of war. Both the text and the Glossary identify terms that have joint or Army definitions. FM 3-05.130 is the proponent field manual (the authority) for UW, but is not the proponent for any other Army term.

Recognizing that “wars are not won by machines and weapons but by the soldiers who use them,” this comprehensive manual not only informs the reader of the timeless skills necessary to survive on the battlefield, but also instructs the soldier on how to perform and execute these tasks to succeed in combat.
