Written by an international group of recognized experts, this volume addresses the complications of spine surgery and the treatment of patients with adverse surgical outcomes. Coverage includes discussions of failed spine fusion, postoperative scoliosis, postoperative flat back, postoperative infection, epidural fibrosis, and complications resulting from implants and devices. Chapters offer guidelines on patient selection for surgery and identify psychosocial risk factors for chronic pain. Sections on treatment of the failed spine cover medications, physical therapy, and invasive modalities including radiofrequency procedures, spinal cord stimulation, epiduroscopy, and revision lumbar fusion. A treatment algorithm for the failed back surgery syndrome is included.

The first book offering a systematic treatment of the economics of antitrust or competition policy.

YOUNG AFRICAN AMERICAN LAWYER JIM REED seemingly has it all. Recently named a junior partner in an Atlanta law firm, Jim is shocked when he stops at his usual gas station and realizes the price of fuel has skyrocketed overnight to fifty dollars a gallon. It is 2033, and the world as Jim knows it is suddenly spinning wildly out of control. Sudden hyperinflation shocks everyone. As panic sets in, the value of the dollar plummets and the resulting devastation causes the United States to splinter into several countries, all of which adopt democratic rules except the one in which Jim Reed and girlfriend Linda Alonzo live. They find themselves citizens of a country governed by a white-supremacist dictatorship. Jim Reed joins a group of African American insurgents and finds himself involved in dangerous, bold attacks on Federated States targets. The insurrection causes the Federated States government to intern or exile the entire Federated States African American population. Reed goes into exile and as he recruits like-minded people to join together with the intent to destroy the Federated States Supremacist government, he conceives a plan that may just become the world's greatest act of terrorism.

Following the Pulitzer prize-winning collection *Stag's Leap*, Sharon Olds gives us a stunning book of odes. Opening with the powerful and tender "Ode to the Hymen," Olds addresses and embodies, in this age-old poetic form, many aspects of love and gender and sexual politics in a collection that is centered on the body and its structures and pleasures. The poems extend parts of her narrative as a daughter, mother, wife, lover, friend, and poet of conscience that will be familiar from earlier collections, each episode and memory burnished by the wisdom and grace and humor of looking back. In such poems as "Ode to My Sister," "Ode of Broken Loyalty," "Ode to My Whiteness," "Blow Job Ode," and "Ode to the Last Thirty-Eight Trees in New York City Visible from This Window," Olds treats us to an intimate examination that, like all her work, is universal, by turns searing and charming in its honesty. From the bodily joys and sorrows of childhood to the

deaths of those dearest to us, Olds shapes the world in language that is startlingly fresh, profound in its conclusions, and life-giving for the reader.

"This original comedy about motherhood rips away the gauzy mask of parenthood to reveal what all mothers know but don't always talk about: it's overwhelming and exhausting, but also very, very funny." --from cover.

"There are cynics who say that a party platform is something that no one bothers to read and it doesn't very often amount to much. Whether it is different this time than it has ever been before, I believe the Republican Party has a platform that is a banner of bold, unmistakable colors, with no pastel shades." –Ronald Reagan, 1976 Republican National Convention
When Ronald Reagan was called to the podium by President Ford during the 1976 Republican National Convention, he had no prepared remarks. But the unrehearsed speech he gave that night is still regarded as one of the most moving speeches of his political career. The reason he was able to give such a powerful speech on a moment's notice was that he was proclaiming the core principles of his heart and soul, which he had been teaching and preaching for years. The New Reagan Revolution reveals new insights into the life, thoughts, and actions of the man who changed the world during the 1980s. The challenges and threats we face today are eerily similar to the conditions in the world before the beginning of the Reagan era. The good news is that we already know what works. Ronald Reagan has given us the blueprint. This book is not merely a diagnosis of our nation's ills, but a prescription to heal our nation, rooted in the words and principles of Ronald Reagan. In these pages, you'll find a plan for returning America to its former greatness, soundness, and prosperity. It's the plan Ronald Reagan developed over years of study, observation, and reflection. It's a plan he announced to the nation, straight from his heart, one summer evening during America's 200th year. It's the plan he put into action during his eight years in office as the most effective president of the 20th century, and it is the plan we

can use today to help return America to its former greatness, soundness, and prosperity.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Robert J. Blackwell Assistant Secretary for Maritime Affairs

The Save a Life Initiative has just released its newest course: Basic Life Support. This manual is based on the 2015-2020 Basic Life Support guidelines published by the American Heart Association. The Basic Life Support (BLS) Provider Handbook is a comprehensive resource intended for health care professionals currently enrolled in a Basic Life Support Certification or Recertification Course. It serves as the primary training material for BLS Certification and Recertification courses. Although it is primarily intended for professionals to use during their courses, the handbook was also created to serve as daily resource material for health care professionals. Information covered in the handbook includes Basic Life Support instruction for adults and children, AED usage, airway obstruction and rescue breathing techniques, and more. Specific Algorithms for BLS and more are also included within the handbook. All material included in this handbook is delivered in a manner meant to enhance learning in the most comprehensive and convenient way possible.

The four-volume set LNCS 8517, 8518, 8519 and 8520 constitutes the proceedings of the Third International Conference on Design, User Experience and Usability, DUXU 2014, held as part of the 16th International Conference on Human-Computer Interaction, HCII 2014, held in Heraklion, Crete, Greece in June 2014, jointly with 13 other thematically similar conferences. The total of 1476 papers and 220 posters presented at the HCII 2014 conferences were carefully reviewed and selected from 4766 submissions. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers accepted for presentation thoroughly cover the entire field of Human-Computer Interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. The total of 256 contributions included in the DUXU proceedings were carefully reviewed and selected for inclusion in this four-volume set. The 66 papers included in this volume are organized in topical sections on design theories,

methods and tools; user experience evaluation; heuristic evaluation; media and design; design and creativity.

An introduction to the social and policy issues which have arisen as a result of IT. Whilst it assumes a modest familiarity with computers, the book provides a guide to the issues suitable for undergraduates. In doing so, the author prompts students to consider questions such as: * How do morality and the law relate to each other? * What should be covered in a professional code of conduct for information technology professionals? * What are the ethical issues relating to copying software? * Is electronic monitoring of employees wrong? * What are the moral codes of cyberspace? Throughout, the book shows how in many ways the technological development is outpacing the ability of our legal systems, and how different paradigms applied to ethical questions often proffer conflicting conclusions. As a result, students will find this a thought-provoking and valuable survey of the new and difficult ethical questions posed by the Internet, artificial intelligence, and virtual reality.
