Do you want to master the era of data economy? Do you want to learn the top programming languages for data science? If yes, then keep reading! One of the core elements of economic growth in the twenty-first century is the data economy. We are all required to educate ourselves about a paradigm that

represents only the very beginning of a genuine industrial revolution, this time driven by data. Data we generate, store, share, analyze, data that describes us, pinpoints where we are, reveals our tastes and preferences, our opinions and also those of our network of family and friends. Data has become a crucial input for any economic process. There is more data being produced daily these days than there was ever produced in even the past centuries! In such a scenario, Data Science is obviously a very popular field as it is important to analyze and process this data to obtain useful insights. According to an IBM report published on Forbes, data science has been ranked the best job in tech for the last 3 years. But in order to be able to assess and analyze the data gathered, you need the best data science tools and skills. In this beginners and practical guide, you are going to learn the best programming language for data science in 2020, the mostly used by other data scientists and that employers are constantly looking. This is a complete guide, with 4 Books in 1: Python crash course Python for data analysis Java programming for beginners SQL for beginners Python is one of the best programming languages for data science because of its capacity for statistical analysis, data modeling, and easy readability. Another reason for this huge success of Python in Data Science is its extensive library support for data science and analytics. There are many Python libraries that contain a host of

functions, tools, and methods to manage and analyze data. Each of these libraries has a particular focus with some libraries managing image and textual data, data mining, neural networks, data visualization, and so on. Java is one of the oldest languages used for enterprise development. Most of the popular Big Data frameworks/tools on the likes of Spark, Flink, Hive, Spark and Hadoop are written in Java. It has a great number of libraries and tools for Machine Learning and Data Science. Some of them being to solve most of your ML or data science problems. SQL is a language specifically created for managing and retrieving the data stored in a relational database management system. This language is extremely important for data science as it deals primarily with data. The main role of data scientists is to convert the data into actionable insights and so they need SQL to retrieve the data to and from the database when required. There are many popular SQL databases that data scientists can use such as SQLite, MySQL, Oracle and Microsoft SQL Server. BigQuery, in particular, is a data warehouse that can manage data analysis over petabytes of data and enable super fats SQL queries. Each of these languages come with their benefits, often offering better and faster results when compared with others. The domain of Data Science is exceedingly vast and can often demand a different set of tools for various tasks. Equipping yourself with more than one programming language can

guarantee to help you overcome unique challenges while dealing with the data. If you are a budding Data Scientist, you should start with the programming languages mentioned above as they are the most in-demand languages right now. Ready to get started? Learn Python Programming In today's Industry, Python Programming is highly recommended for developing Websites. The creator of this programming language was Guido Van Rossum, released first in the year 1991. The multiple supporting programming paradigms made itself unique from other programming languages as it had some outstanding features like unique adaptability, the ability to adopt machine learning, scientific computation, cloud infrastructure and above all web development. Python's role is really commendable in both software

development, as well as, web development. This book is helpful for learning everything Python has to offer.By connecting with a database system Python can read and modify files. To create workflows in Software, this language is helpful. Python also supports a dynamic type s stem, automatic memory management, object-oriented and structured programming Python Coding and Programming Python is one of the easiest computer languages to learn. The most striking part of this language is that it is widely used in NASA. The developers should focus on the quality of the source code to simplify its uses. Other programming languages never focused on the code readability, but Python is always ready to strengthen the code readability with the help of English keywords. Writing additional code is not necessary for Python to create custom applications. When you want to learn a language understood by computers. It supports several programming paradigms like logic programming and design by contract. In late 1980, as a legatee to the ABC language, the python was conceived. The exceptional powerful ideology of this programming language has influenced many other languages, like BOO, GOBRA, JULIA, RUBY, SWIFT, etc, and those languages hire Python designs for their development. Sql Coding for Beginners The truth is: SQL is an abbreviation for Structured Query Language. It is one of the most sought after and simple programming languages of our age. SQL is lost

behind a crowd of other, more popular programming languages such as C++, Python, Java etc. There are many people who have used SQL and discarded its legitimacy as a programming language simply because of its user friendly interface and a limited number of functions. However, all true computer wiz's must know that no matter how developed and advanced third level programming languages such as C++ and Python are, it doesn't change the fact that SQL is also a programming language - a very resourceful one at that. Sql Programming and Coding The truth is: SQL stands for Structured Query Language. Many people scoff dubiously when it is announced that SQL is, indeed, a programming language. When people think of programming languages, all that comes to their mind are C++, Python, Java etc, . People disregard SQL as a programming language because of its interface structure and limited functionality. However, they fail to understand that while C++, Python are third level programming languages, and hence more developed, it doesn't change the fact that SQL falls under the umbrella of programming languages.
