includes bonus questions, PowerPoint slides and bonus tasks to help put new skills into practice immediately. Introduction to Visual Computing: Core Concepts in Computer Vision, Graphics, and Image Processing covers the fundamental concepts of visual computing. Whereas past books have treated these concepts within the context of specific fields such as computer graphics, computer vision or image processing, this book offers a unified view of these core concepts, thereby providing a unified treatment of computational and mathematical methods for creating, capturing, analyzing and manipulating visual data (e.g. 2D images, 3D models). Fundamentals covered in the book include convolution, Fourier transform, filters, geometric transformations, epipolar geometry, 3D reconstruction, color and the image synthesis pipeline. The book is organized in four parts. The first part provides an exposure to different kinds of visual data (e.g. 2D images, videos and 3D geometry) and the core mathematical techniques that are required for their processing (e.g. interpolation and linear regression.) The second part of the book on Image Based Visual Computing deals with several fundamental techniques to process 2D images (e.g. convolution, spectral analysis and feature detection) and corresponds to the low level retinal image processing that happens in the eye in the human visual system pathway. The next part of the book on Geometric Visual Computing deals with the fundamental techniques used to combine the geometric information from multiple eyes creating a 3D interpretation of the object and world around us (e.g. transformations, projective and epipolar geometry, and

3D reconstruction). This corresponds to the higher level processing that happens in the brain combining information from both the eyes thereby helping us to navigate through the 3D world around us. The last two parts of the book cover Radiometric Visual Computing and Visual Content Synthesis. These parts focus on the fundamental techniques for processing information arising from the interaction of light with objects around us, as well as the fundamentals of creating virtual computer generated worlds that mimic all the processing presented in the prior sections. The book is written for a 16 week long semester course and can be used for both undergraduate and graduate teaching, as well as a reference for professionals.

Principles of Information Technology presents basic principles and concepts about information technology to help students become more valuable employees, better citizens, and knowledgeable consumers. Written specifically for high school students, this text maps to the IC3 Digital Literacy Certification standards. By studying this text, students can prepare for taking the Certiport IC3 Digital Literacy Certification exams. IC3 Digital Literacy Certification is a well-respected and internationally recognized credential.

Class-tested and coherent, this textbook teaches classical and web information retrieval, including web search and the related areas of text classification and text clustering from basic concepts. It gives an up-to-date treatment of all aspects of the design and implementation of systems for gathering, indexing, and searching documents; methods for evaluating systems; and an introduction to the use of machine learning methods on text collections. All the important ideas are explained using examples and figures, making it perfect for introductory courses in information retrieval for advanced undergraduates and graduate students in computer science. Based on feedback from extensive classroom experience, the book has been carefully structured in order to make teaching more natural and effective. Slides and additional exercises (with solutions for lecturers) are also available through the book's supporting website to help course instructors prepare their lectures.

A Radical New Take On Norse Paganism The Way of Fire and Ice reimagines Norse Paganism with mystical practices and rituals for today's world as well as tips for building community and resisting fascism. This approach to working with Norse deities and beliefs is a living, adaptable tradition, representing a strong alternative to the reconstructionist perspectives of Asatru and Heathenry. In these pages, the old ways come alive in a radically inclusive form. You will explore the secrets of the World Tree and the mysteries of the gods, work with the many spirits around us, and feel the deep rhythms that drive all life while creating new songs of power. You will also discover how to make these practices part of your every waking moment, developing your own personal spirituality and building healthy, sustainable communities

Written to provide all readers with an opportunity to learn and demonstrate computer and Internet literacy. Computer Literacy for IC3 was written to align with a certification called "Internet and Computing Core Certification (IC3)". This certification is for users who want to demonstrate critical computer and Internet skills valued in today's academic and professional environments. The Computer Literacy for IC3 text is written to meet the certification standards and provide readers with a broad understanding of the key components of computer literacy in order to prepare for the exam. This certification has 3 units: * Unit 1: Computing Fundamentals (computer concepts) * Unit 2: Using Productivity Software * Unit 3: Living Online (the Internet) Each of these units is available as a separate Computer Literacy for IC3 text. This text contains: Unit 1: Computing Fundamentals and covers basic computer concepts including computer hardware, computer software, and using an operating system. The second edition of Computer Literacy for IC3 has been revised to keep up with the IC3 program's evolution, which reflects the recent changes in computers and technology. Instead of publishing one large, comprehensive text, the three units are now available as separate, smaller texts.
