

Subjects For Argumentative Papers

Research is difficult. Even though students are trained in the basic research methodology skills, when confronted with research writing, it feels to them as if they enter a bizarre world, with its own language and conventions, where it is hard to get things right. This book translates the apparent complexities of research writing into everyday ideas, language and skills, and will enable novice researchers to start overcoming the major stumbling blocks immediately. This book focuses only on the greatest challenges in research writing, specifically those that supervisors find most difficult to explain to novice researchers. These challenges include both basic and more complex skills, such as: finding original research contributions; establishing one's voice while drawing on other authors; turning a vague idea into a feasible research question; generating literature reviews that are original in themselves; and avoiding list-like writing when discussing the research methodology. Wentzel shows that it is easier to overcome these challenges, not with lists of prescriptions that are difficult to remember while writing, but rather by cultivating an argumentative mindset. Not only is such a mindset much easier to maintain, but it offers a central point around which one can organise any difficult writing task. The book shows how to use the argumentative mindset to approach every important writing challenge. It translates all the necessary skills into jargon-free language using a variety of visuals and simple step-by-step procedures that will enable any person to read the book quickly and start writing immediately. The book is accompanied by a website containing an instructor's manual with guidance on the teaching and assessment of research writing, as well as lecture slides.

This is the classic tale of "Frankenstein," first published in 1818 by Mary Shelley. It tells the story of Victor Frankenstein, a young scientist who creates a grotesque creature. The book is written in the form of letters and narratives by multiple narrators.

THIS TITLE HAS BEEN UPDATED TO REFLECT THE 2016 MLA UPDATE. The best-selling book on academic writing in use at more than 1,500 schools. "

Originally published in 1948, at the height of post-World War II optimism and confidence in collective security, Ideas Have Consequences uses "words hard as cannonballs" to present an unsparing diagnosis of the ills of the modern age. Widely read and debated at the time of its first publication, the book is now seen as one of the foundational texts of the modern conservative movement. In its pages, Richard M. Weaver argues that the decline of Western civilization resulted from the rising acceptance of relativism over absolute reality. In spite of increased knowledge, this retreat from the realist intellectual tradition has weakened the Western capacity to reason, with catastrophic consequences for social order and individual rights. But Weaver also offers a realistic remedy. These difficulties are the product not of necessity, but of intelligent choice. And, today, as decades ago, the remedy lies in the renewed acceptance of absolute reality and the recognition that ideas—like actions—have consequences. This expanded edition of the classic work contains a foreword by New Criterion editor Roger Kimball that offers insight

into the rich intellectual and historical contexts of Weaver and his work and an afterword by Ted J. Smith III that relates the remarkable story of the book's writing and publication. Explores the homogenization of American culture and the impact of the fast food industry on modern-day health, economy, politics, popular culture, entertainment, and food production. The story of Egypt is the story of history itself—the endless rise and fall, the life and death and life again of the eternal human effort to endure, enjoy, and understand the mystery of our universe. Emerging from the ancient mists of time, Egypt met the challenge of the mystery in a glorious evolution of religious, intellectual, and political institutions and for two millennia flourished with all the vigor that the human heart can invest in a social and cultural order. Then Egypt began to crumble into the desert sands and the waters of the Nile, and her remarkable achievements in civilization became her lingering epitaph. John A. Wilson has written a rich and interpretive biography of one of the greatest cultural periods in human experience. He answers—as best the modern Egyptologist can—the questions inevitably asked concerning the dissolution of Egypt's glory. Here is scholarship in its finest form, concerned with the humanity that has preceded us, and finding in man's past grandeur and failure much meaning for men of today.

Few arguments in biomedical experimentation have stirred such heated debate in recent years as those raised by animal research. In this comprehensive analysis of the social, political, and ethical conflicts surrounding the use of animals in scientific experiments, Barbara Orlans judges both ends of the spectrum in this debate -- unconditional approval or rejection of animal experimentation -- to be untenable.

Instead of arguing for either view, she thoughtfully explores the ground between the extremes, and convincingly makes the case for public policy reforms that serve to improve the welfare of laboratory animals without jeopardizing scientific endeavor. This book presents controversial issues in a balanced manner based on careful historical analysis and original research. Different mechanisms of oversight for animal experiments are compared and those that have worked well are identified. This compelling work will be of interest to biomedical scientists, ethicists, animal welfare advocates and other readers concerned with this critical issue.

At its best, educational television can provide children with enormous opportunities and can serve as a window to new experiences, enrich academic knowledge, enhance attitudes and motivation, and nurture social skills. This volume documents the impact of educational television in a variety of subject areas and proposes mechanisms to explain its effects. Drawing from a wide variety of research spanning several disciplines, author Shalom M. Fisch analyzes the literature on the impact of educational resources. He focuses on television programs designed for children rather than for adults, although adult literature is included when it is particularly relevant. In addition, much of the discussion concerns the effects of unaided viewing by children, rather than viewing in the context of adult-led follow-up activities.

The role of parent-child co-viewing and issues relevant to the use of television in school or child care also receives consideration. This volume is intended to make the disparate literature on educational television's impact more accessible, by bringing it together into a centralized resource. To that end, the volume draws together empirical data on the impact of educational television programs--both academic and prosocial--on children's knowledge, skills, attitudes, and behavior. In addition to its emphasis on positive effects, this volume addresses a gap in the existing research literature regarding children's learning from exposure to educational television. Acknowledging that little theoretical work has been done to explain why or how these effects occur, Fisch takes a step toward correcting this situation by proposing theoretical models to explore aspects of the mental processing that underlies children's learning from educational television. With its unique perspective on children's educational television and comprehensive approach to studying the topic, this volume is required reading for scholars, researchers, and students working in the area of children and television. It offers crucial insights to scholars in developmental psychology, family studies, educational psychology, and related areas.
