Hydroponics simply means working water ("hydro" means "water" and "ponos" signifies "labor"). Many distinct civilizations have used hydroponic growing techniques: hanging gardens of Babylon, the floating gardens of the Aztecs of Mexico and people of the Chinese are cases of 'Hydroponic' culture. Hydroponics is of course a new way of growing plants. Hydroponic gardening can be VERY complex, with sensors and computers controlling everything from watering cycles to nutrient power and the total amount of light the plants get. On the flip side, hydroponics may also be incredibly straightforward, a hand watered bucket of sand using one plant can also be a way of hydroponic gardening. Many hobby-oriented hydroponics systems are somewhere between the two extremes mentioned previously. The "average" home hydroponic system generally contains a couple of basic components: a growing tray, a reservoir, an easy timer controlled submersible pump to water the plants and an air pump and air stone to oxygenate the nutrient solution. Obviously, light (either artificial or natural) can also be required. Now, much of the food on the dinner table is homegrown. There's a certain satisfaction in knowing that the food on your dinner table is grown using your skills. How have Japanese companies become world leaders in the automotive and electronics industries, among others? What is the secret of their success? Two leading Japanese business experts, Ikujiro Nonaka and Hirotaka Takeuchi, are the first to tie the success of Japanese companies to their ability to create new knowledge and use it to produce successful products and technologies. In *The Knowledge-Creating Company*, Nonaka and Takeuchi provide an inside look at how Japanese companies go about creating this new knowledge organizationally. The authors point out that there

are two types of knowledge: explicit knowledge, contained in manuals and procedures, and tacit knowledge, learned only by experience, and communicated only indirectly, through metaphor and analogy. U.S. managers focus on explicit knowledge. The Japanese, on the other hand, focus on tacit knowledge. And this, the authors argue, is the key to their success--the Japanese have learned how to transform tacit into explicit knowledge. To explain how this is done--and illuminate Japanese business practices as they do so--the authors range from Greek philosophy to Zen Buddhism, from classical economists to modern management gurus, illustrating the theory of organizational knowledge creation with case studies drawn from such firms as Honda, Canon, Matsushita, NEC, Nissan, 3M, GE, and even the U.S. Marines. For instance, using Matsushita's development of the Home Bakery (the world's first fully automated bread-baking machine for home use), they show how tacit knowledge can be converted to explicit knowledge: when the designers couldn't perfect the dough kneading mechanism, a software programmer apprenticed herself with the master baker at Osaka International Hotel, gained a tacit understanding of kneading, and then conveyed this information to the engineers. In addition, the authors show that, to create knowledge, the best management style is neither top-down nor bottom-up, but rather what they call "middle-up-down," in which the middle managers form a bridge between the ideals of top management and the chaotic realities of the frontline. As we make the turn into the 21st century, a new society is emerging. Peter Drucker calls it the "knowledge society," one that is drastically different from the "industrial society," and one in which acquiring and applying knowledge will become key competitive factors. Nonaka and Takeuchi go a step further, arguing that creating knowledge will become the key to sustaining a competitive advantage in the future. Because the competitive environment and customer preferences changes constantly, knowledge perishes quickly. With *The Knowledge-Creating Company*, managers have at their fingertips years of insight from Japanese firms that reveal how to create knowledge continuously, and how to exploit it to make successful new products, services, and systems. Can Pacific nations, endowed with islands of travel poster beauty, vibrant cultures, and centuries old ways of life based on sustainable practices, hurdle significant development and political challenges they face today - in addition to withstanding climate change and rising sea levels? Corruption, reliance on donor-driven aid and consultants, dwindling rural populations and burgeoning urban centers that stress the ability of governments to provide education and health services, an epidemic of non-communicable diseases as lifestyles change, and battles with countries outside the region for control of fisheries and deep sea resources - these are among the

increasingly challenging issues facing the islands today. In a series of essays about the looming climate threat, sustainable development and the region's multi-billion dollar tuna industry, the U.S. nuclear test legacy in the Marshall Islands, and the impact of out-migration, 'Idyllic No More' addresses the often difficult problems and choices facing the Pacific islands today. The author, says veteran Oceania journalist Floyd K. Takeuchi, "frames a view of the Pacific islands that's characterized by hard-edge realism while offering a way forward. 'Idyllic No More' is a bracing look at where the islands are today, and what it will take to build a future of hope and opportunity for islanders across the region." 'Idyllic No More' is an excellent resource for stimulating discussion in classes, and for readers interested in contemporary Pacific island issues.

Since publication of the third edition in 2004 there have been important advances. Several endocrine disorders, such as feline acromegaly and hyperaldosteronism, have risen in importance. The use of diet and novel insulins in diabetic cats, and new drugs such as

trilostane and methimazole, which were briefly mentioned in previous editions are now considered routine. In addition, the genetic risks associated with many disorders have been elucidated. • A new chapter presents the principles of interpreting endocrine test results and discusses how test performance is assessed in relation to diagnostic confidence. • The central section on glands and their diseases is presented in a standard format -- detailing physiology, aetiology, clinical features, diagnosis and treatment - to aid information retrieval. • The final section has been rewritten to focus on solving clinical and clinicopathological abnormalities with an endocrine dimension.

Over the past generation, the rise of East Asia and especially China, has brought about a sea change in the economic and political world order. At the same time, global warming, environmental degradation, food and water shortages, population explosion, and income inequities have created a perfect storm that threatens the very survival of humanity. It is clear now that the Westphalian model of individual sovereign states seeking their own self-interest will not be able to respond effectively to this win-win or lose-lose crisis. In this volume, a cadre of distinguished scholars comes together to reflect on Confucianism and Deweyan pragmatism as possible resources for a new geopolitics that begins from an ontology of interdependence and recognizes the irreducibly ecological nature of the human experience at every level. Both Confucian and Deweyan traditions emphasize the primacy of experience, the importance of vital relationality, and the moral roots of good governance. The potential benefits of conceptually blending the two are many. Indeed, the contemporary Chinese philosopher Tang Junyi provides us with a cosmological understanding of the "idea" of Confucianism that, in parallel to Dewey's "idea" of democracy, can enable us to anticipate the core values, if not the specific contours, of a "Confucian democracy." Just as Dewey's "idea" of democracy is his vision of the flourishing communal life made possible by the contributions of the uniquely distinguished persons that constitute it, Tang Junyi's Confucianism is a pragmatic naturalism directed at achieving the most highly integrated cultural, moral, and spiritual growth for the individual-in-community. In both, we find an affirmation of communal harmony as a process "starting here and going there" through which those involved learn together to do ordinary things in extraordinary ways. Just such a cosmological understanding of democracy is one way of describing what will be needed to address the many predicaments characterizing the environmental, cultural, socioeconomic, and political dynamics of the twenty-first century. Just as everything appears to be going his way, Sherlock finds himself arrested for a murder he didn't commit in a plot orchestrated by none other than Moriarty! He soon escapes police custody and sets out to clear his name. The victim, Count Drebber, wrote Sherlock's name in blood before he died, but why? Will Sherlock be able to solve this puzzle and save himself? --
