Directing the Decades is an examination of the development of theatre in the UK since the revolution of the 1950s until the present day, viewed through the individual progress of a female director from a working-class background. In this book, theatre history and lessons on directing are interwoven: the history is presented decade by decade, examining particular productions. Each historical theatre chapter is followed by a method chapter examining directorial influences and techniques predominant in each decade, as well as examining the working experience of the author in that decade. The book also includes practical advice on the directing process, including exercises, plans for rehearsals, and camera plans. Sue Dunderdale offers a unique perspective on the evolution of theatre directing in the UK, and her work, which served as the foundation of the creation of the Theatre Lab and Directing program at RADA, continues to influence working directors today. Directing the Decades will be of interest to students and practitioners of theatre directing, acting, and theatre history, and to theatregoers with a consciousness of class and how it impacts on our lives. The book also offers access to online transcripts of interviews with 16 practitioners, including Rufus Norris, Michelle Terry, Kwame Kwei-Armah, Indhu Rubasingham, Nadia Latif, and Nadia Fall.

Jeffrey Archer's mesmerizing saga of the Clifton and Barrington families continues... 1945, London. The vote in the House of Lords as to who should inherit the Barrington family fortune has ended in a tie. The Lord Chancellor's deciding vote will cast a long shadow on the lives of Harry Clifton and Giles Barrington. Harry returns to America to promote his latest novel, while his beloved Emma goes in search of the little girl who was found abandoned in her father's office on the night he was killed. When the general election is called, Giles Barrington has to defend his seat in the House of Commons and is horrified to discover who the Conservatives select to stand against him. But it is Sebastian Clifton, Harry and Emma's son, who ultimately influences his uncle's fate. In 1957, Sebastian wins a scholarship to Cambridge, and a new generation of the Clifton family marches onto the page. But after Sebastian is expelled from school, he unwittingly becomes caught up in an international art fraud involving a Rodin statue that is worth far more than the sum it raises at auction. Does he become a millionaire? Does he go to Cambridge? Is his life in danger? Best Kept Secret, the third volume in Jeffrey Archer's bestselling series, will answer all these questions but, once again, pose so many more. Running title: The Yamaha guide to sound systems for worship.

When we went to the Palace to get The Beatles their OBEs. John Lennon had some acid with him. 'I'm gonna slip it into the Queen's tea,' he told me. 'I want to open her mind and try to get her to declare war on somewhere nice and warm so we can all go and fight on the beaches.' After Jane Asher dumped Paul McCartney he literally used to cry on my shoulder. We hit the bottle together. Hard. 'I had everything and I threw it all away,' he would say. Alistair Taylor was with The Beatles from the moment they signed with Brian Epstein. In fact, apart from the signatures of each of the Fab Four, his is the only other name on the contract. From the very beginning he travelled, ate, partied, and even holidayed with them, right up until the beginning of the group's spectacular break up. As the group's 'Mr Fixit' he settled paternity cases, bought islands, houses and estates, and took care of John, Paul, George and Ringo when their lifestyles became a little too lively. Now, on the 50th anniversary of Ringo's appointment as drummer, he reveals for the first time what it was really like to ride the rollercoaster that was the sixties with The Beatles.

The Hermeneutics of the Subject is the third volume in the collection of Michel Foucault's lectures at the Collège de France, one of the world's most prestigious institutions. Faculty at the Collège give public lectures, in which they present works-in-progress on any subject of their choosing. Foucault's wide-ranging lectures influenced his groundbreaking works like The History of Sexuality and Discipline and Punish. In the lectures comprising this volume, Foucault focuses on how the "self" and the "care of the self" were conceived during the period of antiquity, beginning with Socrates. The problems of the ethical formation of the self, Foucault argues, form the background for our own questions about subjectivity and remain at the center of contemporary moral thought. This series of lectures throws new light on Foucault's final works and shows the full depth of his engagement with ancient thought. Lucid and provocative, The Hermeneutics of the Subject reveals Foucault at the height of his powers.

This surprising study draws together the disparate fields of postcolonial theory and book history in a challenging and illuminating way. Robert Fraser proposes that we now look beyond the traditional methods of the Anglo-European bibliographic paradigm, and learn to appreciate instead the diversity of shapes that verbal expression has assumed across different societies. This change of attitude will encourage students and researchers to question developmentally conceived models of communication, and move instead to a re-formulation of just what is meant by a book, an author, a text. Fraser illustrates his combined approach with comparative case studies of print, script and speech cultures in South Asia and Africa, before panning out to examine conflicts and paradoxes arising in parallel contexts. The re-orientation of approach and the freshness of view offered by this volume will foster understanding and creative collaboration between scholars of different outlooks, while offering a radical critique to those identified in its concluding section as purveyors of global literary power.

'On November 2nd armed with a sheaf of visas...one suitcase...and my typewriter, I left humdrum London for the thrilling cities of the world...' In 1959, Ian Fleming, the creator of James Bond, was commissioned by the Sunday Times to explore fourteen of the world's most exotic cities. Fleming saw it all with a thriller writer's eye. From Hong Kong to Honolulu, New York to Naples, he left the bright main streets for the back alleys, abandoning tourist sites in favour of underground haunts, and mingling with celebrities, gangsters and geishas. The result is a series of vivid snapshots of a mysterious, vanished world.

Dividing classical and popular music recording into two distinct sections, this book focuses on the special techniques used for recording outside the confines of the studio and shows readers how to interface with sound reinforcement equipment in the hall or club. Recent developments in portable digital multitrack recorders and high-quality mixers have made on-location recording feasible for all recording engineers. Many bands want to be recorded in concert because they feel that is when they play their best music. The engineer's job is to capture that performance on tape and bring it back live and there's only one chance to get it right. This book covers all aspects of live recording, with a special section on miking techniques for surround sound. Pre-session procedures, such as power and grounding practice, pre-production meetings, and site surveys are fully examined. On Location Recording Techniques also describes the paperwork required to plan a live recording session. A study of surround miking techniques for both classical and popular music, and of the components needed to build a quality remote recording truck complete this book.

Written by a team of experts, the Loudspeaker and Headphone Handbook provides a detailed technical reference of all aspects of loudspeakers and headphones: from theory and construction of transducer drive units and enclosures, to such practical matters as construction, applications in rooms, public address, sound reinforcement, studio monitoring and musical instruments. The prospect of writing a book on loudspeakers is a daunting one, since only a multivolume encyclopedia could truly do justice to the subject. Authors writing about this subject have generally concentrated on their own areas of expertise, often covering their own specific topics in great detail. This book is no exception; the author's background is largely in professional loudspeaker application and specification, and the emphasis in this book is on basic component design, operation, measurement, and system

concepts. The book falls largely into two sections; the first (Chapters 1-9) emphasizing the building blocks of the art and the second (Chapters 10-16) emphasizing applications, measurements, and modeling. While a thorough understanding of the book requires a basic knowledge of complex algebra, much of it is understandable through referring to the graphics. Every attempt has been made to keep graphics clear and intuitive. Chapter 1 deals with the basic electro-mechano-acoustical chain between input to the loudspeaker and its useful output, with emphasis on the governing equations and equivalent circuits. Chapter 2 is a survey of cone and dome drivers, the stock-in-trade of the industry. They are discussed in terms of type, design, performance, and performance limits. Chapter 3 deals with magnetics. Once a source of difficulty in loudspeaker design, magnetics today yields easily to modeling techniques. Chapter 4 discusses low-frequency (LF) system performance, primarily from the viewpoint of Thiele-Small parameters. We also discuss some of the multi chamber LF systems that became popular during the eighties.
