Contains facts about the tarantula and the scorpion, comparing such aspects as their sizes, brain structure, and abilities.

With his signature humor and amazing facts, best-selling author Jerry Pallotta offers a decapod for every letter of the alphabet. Meet dozens of crustaceans--and a few bonus animals--with engaging text and a laugh-out-loud narrative, from A (Arrow Crab) to E (exoskeleton) to I (Imocaris, a kind of fossil scientists believe to be the first crab on earth) to Z (Zebra Hermit Crabs, which have a hard covering on their legs and claws, but their body is soft). Readers of all ages will be entertained (and learning!) with every page turn.

What would happen if a wolverine and a Tasmanian devil met had a fight? Who do you think would win?

What if a rhino and a hippo had a fight? Who do you think would win?

What would happen if a hornet and a wasp had a fight? Who do you think would win?

This publication is an account of the distribution, morphology, biology and classification of those scorpions considered to be of medical importance. The book also contains information on the clinical aspects of scorpion envenomation, and on methods for

scorpion control. Though the scope of this book is clearly delineated by its title, *Scorpions of Medical Importance*, Professor Keegan does consider those genera and species of scorpions that are not of medical importance, but commonly occur in association with man, and are often greatly feared. He has done so because of the scorpion's potential as a stimulus for entomophobia. While this fear, created in part by folklore, dramatic but inaccurate literature, and television and motion picture sequences, is useful in areas where dangerously venomous scorpions exist, it has also created much needless apprehension. It will surely be a revelation to many readers that of approximately 800 species that have been described, only about 50 have been reported as being dangerous to man. A valuable feature of *Scorpions of Medical Importance* is the outstanding drawings that have been used to illustrate the species. It is not often that one comes across drawings so striking in their precision and attention to even the most minute details. As one of the very few books dealing solely with the general subject of scorpions of medical importance, this publication should be a useful reference for all of those interested in the distribution, biology, and control of dangerously venomous scorpions, and in clinical aspects of scorpion envenomation. The book also contains an index, bibliography, and pertinent references to related species not discussed in the book.

Scorpions and tarantulas may be small. But these two animals know how to fight! In this high-interest title, reluctant readers will learn about how these two creatures get ready to battle. Visual features offer stats and comparisons to highlight traits of each animal. A final fight scene applies the content of the book in an action-packed finale!

If a scorpion and a tarantula were to meet and fight, which one would win? Read this book to find out! The Capstone Interactive edition comes with simultaneous access for every student in your school and includes read aloud audio recorded by professional voice over artists.

"Can Ryder and his heroic team save Adventure City from the meddling Mayor Humdinger in their greatest rescue ever?"--

It's fight time for the deathstalker scorpion and the Sydney funnel-web spider! One animal is The Stinging Striker, and the other animal is The Web Master. Both fighters can inject potent venom. But which one will be crowned champion of the Attack of the Arachnids?

What would happen if a hammerhead shark and bull shark had a fight? This nonfiction reader compares and contrasts two ferocious shark species. Students will learn about the sharks' anatomies, behaviors, and more. Includes beautiful photos, charts, illustrations, and fascinating facts.

Sixteen different ocean animals battle it out in a huge underwater fight! Who will be the champion?

Ready to go birding? Quick! Can you think of a bird whose name begins with X? Jerry Pallotta found one, and also birds for Q and Z and all the other letters of the alphabet. But this isn't a simple "A is for Atlantic Puffin" kind of alphabet book. Find out where these birds live, how they survive, and the unique qualities that make them interesting. Full of facts and fun, this book is sure to intrigue children with its array of feathered friends, from the familiar to the exotic. Take a brilliant tour of the bird world.

Twelve different reptiles battle it out in a huge fight! Who will be the champion? This nonfiction reader compares and contrasts 16 ferocious reptiles. Readers will learn about each animal's anatomy, behavior, and more. Then compare and contrast the battling animals before finally discovering the winner! This nonfiction series is full of facts, photos, and realistic illustrations, and it includes a range of mammals, sea creatures, insects, and dinosaurs to satisfy all kinds of animal fans.

This nonfiction reader compares and contrasts two ferocious birds. Readers will learn about each animal's anatomy, behavior, and more. Then compare and contrast the battling pair before finally discovering the winner.

Tarantula Vs. Scorpion

A richly illustrated and up-close look at the secret lives of spiders and other arachnids The American Southwest is home to an extraordinary diversity of arachnids, from spitting spiders that squirt silk over their prey to scorpions that court one another with kissing and dancing. Amazing Arachnids presents these enigmatic creatures as you have never seen them before. Featuring a wealth of color photos of more than 300 different kinds of arachnids from eleven taxonomic orders--both rare and common species--this stunningly illustrated book reveals the secret lives of arachnids in breathtaking detail, including never-before-seen images of their underground behavior. Amazing Arachnids covers all aspects of arachnid biology, such as anatomy, sociality, mimicry, camouflage, and venoms. You will meet bolas spiders that lure their victims with fake moth pheromones, fishing spiders that woo their mates with silk-wrapped gifts, chivalrous cellar spiders, tiny mites, and massive tarantulas, as well as many others. Along the way, you will learn why arachnids are living fossils in some respects and nimble opportunists in others, and how natural selection has perfected their sensory structures, defense mechanisms, reproductive strategies, and hunting methods. Covers more than 300 different kinds of arachnids, including ones new to science Features more than 750 stunning color photos Describes every aspect of arachnid biology, from physiology to biogeography Illustrates courtship and mating, birth, maternal care, hunting, and defense Includes first-ever photos of the underground lives of schizomids and vinegaroons Provides the first organized guide to macroscopic mites, including photos of living mites for easy reference
