Reviewer Praise for Benedetti's "The Actor at Work" "As I have been going over this text again and again attempting to make some sort of meager offering to make it better, I have fallen in love with this text all over again." actor." William Gelber, "Texas Tech University" "I have always considered Benedetti's textbook to be an excellent resource for any teacher of acting." Lori Horvik, "North Dakota State University" "This is a book with the potential to transform the novice actor." Matt Tomlanovich, "Southern Methodist University" "Benedetti's language is just sophisticated enough to make the subject matter feel important and yet it's not so complex or abstract that it becomes tiresome or overwhelming." "I think it is the best text on the market for non-majors that manages to be sophisticated enough for majors." Rebecca Hilliker, "University of Wyoming" "Benedetti's exercises are challenging and fun, and don't ask more from the student than they are comfortable doing." Nancy Silva, "American River College" "In my opinion "The Actor at Work" remains the best acting text on the market. Having examined numerous other acting texts, I continue to be amazed at the clarity, substance, and quality of Benedetti's text." George Sorensen, "Texas Tech University" "The exercises are terrific and support the text very well. I am amazed at how quickly my students respond to the exercises and 'catch on' to the intent." In this surprisingly lively approach to recording the impact of technology on the war at sea, Kenneth Poolman follows comprehensive descriptions of each new technical development with dramatic examples of its use in action. To combat the savage campaign mounted by German submarines and surface raiders to keep vital supplies from the Allies, Allied navies deployed new weapons like ASDIC (sonar), RDF (radar), high frequency direction-finding, forward-firing mortars, and rocket projectiles, all thoroughly examined by the author along with the U-boats' use of acoustic torpedoes, Schnorkel tubes to breathe underwater, radio-controlled missiles, and supersonic undersea detectors in a war that became a conflict of technologies. This book also covers the use of radar in the Pacific against the Japanese "long lance" torpedoes and shows how U.S. submarines overcame their own faulty torpedoes to decimate enemy shipping, and how carrier airpower, controlled by multichannel high-frequency radio, dominated surface actions. He details the development and use of sensitive listening
