In parallel, beginning at the time of the attack on the World Trade Center, the last twenty years have seen an unprecedented period of innovation, creativity and disruption on a global scale. New inventions have multiplied, every country, industry, and business has been fundamentally altered, and we all live very different lives today. Global crises have come and gone and come again, terrorist threats have multiplied and new distributed organizations have been established to preserve privacy, freedom and independence. Ignota Books publishes the original white paper by Satoshi Nakamoto on its tenth anniversary, providing a guide to the blockchain technology that is transforming our lives. In the wake of the 2008 financial crisis, the mysterious Satoshi Nakamoto published a revolutionary white paper that described a simple peer-to-peer electronic cash system that would later become Bitcoin. In the decade since the launch of the digital currency, the nascent blockchain technology behind Bitcoin has been heralded as having the same radical potential as the printing press or the Internet, in particular presenting extraordinary challenges to traditional banking. Yet the paper contains no reference to existing political ideas, monetary or economic knowledge. Why? The White Paper returns to Nakamoto's canonical text as a Rosetta Stone that can serve as the compass for a rapidly shifting terrain of contemporary techno-politics. Crypto-economist Jaya Klara Brekke provides a guide and commentary, contextualising the paper for a wide readership and revealing the far-reaching implications of decentralisation. Also includes an introduction by acclaimed artist and technologist James Bridle situating Bitcoin within an obscure historical movement of decentralisation, showing how blockchain is part of a wider project to redraw the maps of political possibility.

Bitcoin is a global phenomenon that has taken over the globe. Funny Money is no longer a laughing matter. After years in the background the founders and visionaries emerge with a team of stellar innovators to set the record straight about the past and the future. Satoshi Nakamoto the visionary team shows us why there can only be one truth in time which is immutable. Knowing they could trust no one around them, they left their identification mark on the actual code itself to be retrieved as Id when they returned. They stunned the world to show the power of a decentralized system in real time. Like the Voynich code Satoshi Nakamoto and the team around them seek to preserve their legacy in plain view. See if

you can find the secrets they leave behind in many forms. Follow the journey from the beginning and see how much went into creating a platform designed with the guidance of nature itself is surpassing modern technology to create an amazing future. Data embedded in the past becomes immutable in the future when retrieved and the keys of decryption display the message left by those who encrypted it. If we claim to be cryptographers and do not have anything encrypted it seems we are not worthy of the name. In the future our generations will look back at those who fought to hold on to the old ways as barbaric. Once we used an outhouse and today we have a modern sanitary system that has cut down many diseases; this is how we view the system we built to clean up the corruption in a system that could not regulate itself.
