This book is an essential guide or foundational toolkit for anyone who is involved in the process of developing, offering or selling any type of product or service. Based on how to surf on the waves of innovation and the principle of “form follows function” (System Architecture), it introduces and connects concepts like Market Understanding, Design Thinking, Design to Value, Modularization and Agility. It introduces readers to the essence of these main frameworks and provides a toolkit that explains both theoretically and practically when and how to utilize which one. The methods and processes described in this book have all been successfully tested in many industries. They apply in today’s market context of high uncertainty, complexity and turbulence, where innovation and disruption are essential. Readers will find answers to two fundamental questions: How can we implement an innovation process and environment that are conducive to successful product design? And, if our products fail to appeal to customers, how can we achieve a major turn-around with regard to product development? A wealth of examples and case studies help readers to benefit from the authors’ broad professional experience. Further, lessons learned and conceptual summaries provide valuable shortcuts to the methods and tools discussed. For today’s CEOs, enabling innovation is one of THE most complex leadership tasks. But innovation is not about theory and nice buzzwords. It’s about succeeding in the real world. This ‘hands-on’ book connects the dots and introduces the reader to some of the most relevant ideas and pragmatic concepts fitting today’s business reality. Dr. Robert Neuhauser, Executive VP and Global Head People and Leadership Development, Siemens At the most fundamental level this book brings order to chaos. It sets different and highly relevant design approaches into a complementary picture, rather than presenting them as competing ways of solving the same problem. Product designers, managers, consultants, scholars and students will surely have this valuable

book within reach on a daily basis. Olivier L. de Weck, Ph.D – MIT Professor of Aeronautics and Astronautics and Engineering Systems, Editor-in-Chief Systems Engineering

Global virtual teams (GVTs) have evolved as a common work structure in multinational corporations due to their efficiency and cost-effectiveness. The cultural differences can produce great benefits in terms of perspective, creativity, and innovation, but can also exacerbate interpersonal tensions, miscommunications, and clashing decision-making behaviors. This book outlines cultural competencies specific to GVTs and sheds light on management strategies for creating an optimal inter-cultural GVT environment. It covers theory, decision making strategies, and activities for cultural competence and problem resolution, all told through vignettes and lessons-learned.

Iteration rules product development, but it isn't enough to produce dramatic results. This book champions Radical Product Thinking, a systematic methodology for building visionary, game-changing products. Methodologies such as Lean and Agile have democratized innovation by teaching us to harness the power of iteration to innovate faster, but our ability to set a clear destination hasn't kept up with the pace. When we iterate without a clear vision or strategy, our products become bloated, fragmented, and driven by irrelevant metrics. They catch “product diseases” that are often fatal to true innovation. In Radical Product Thinking (RPT), product development is led by the vision for the change it's intended to create. This methodology helps leaders reimagine the problems they face and align their team to find creative solutions using five elements: Vision, Strategy, Prioritization, Execution, and Culture. R. Dutt guides readers through these elements so they develop a clear process for achieving their desired change, incorporate it into daily activities, and turn RPT skills into muscle memory. This book gives organizations a repeatable model for building vision-driven products by helping us systematically translate vision and strategy into everyday actions so our product becomes a vehicle for creating the change we want to see in the world. Dutt shows us that you don't have to be a natural-born visionary to produce extraordinary results.

For many in Product Management, success comes from mastery of tools like roadmaps, MVPs, strategy frameworks and OKRs. These and other technical skills describe what a product person does to design, build and support new complex technologies for our users. But as technologies quickly become ubiquitous, it's the human approach to creativity, innovation, decision-making, and leadership that makes the difference in whether an individual, team, product, and even organization is successful or not. These human skills describe how a product person works and must

go hand-in-hand with the technical skills. Through the story of a new director of product's missteps as he and his team try to hire their way to become a thriving product organisation at a global financial services firm, the author pulls from her experience in product management, org design and leadership coaching to introduce practical tools that will change not only how an organisation hires, but how they think of a healthy product management culture and essential product skills. Working together, the team begins to understand and grow their Product EQ, and through the easy tools and exercises in this book, so can you."This book is a fantastic catalyst to rethink which skills you need in a product team in order to be truly innovative - and then details exactly how to change both your hiring and coaching practices to foster those skills in your organisation." Martin Eriksson - Co-Author, Product Leadership " I loved this book. It pin points the aspects of Product Management we often gloss over, hiring the right people. Kate shows us that human skills are a pre-requisite for all successful product people, not just technical skills. Follow her advice and approach, and you'll find the right product person for your product team in no time." Adrienne Tan - Co-Founder and Chief Executive Officer, Brainmates

Practical, Proven Tools for Leading and Empowering High-Performing Agile Teams A leader is like a farmer, who doesn't grow crops by pulling them but instead creates the perfect environment for the crops to grow and thrive. If you lead in organizations that have adopted agile methods, you know it's crucial to create the right environment for your agile teams. Traditional tools such as Gantt charts, detailed plans, and internal KPIs aren't adequate for complex and fast-changing markets, but merely trusting employees and teams to self-manage is insufficient as well. In Agile Leadership Toolkit, longtime agile leader Peter Koning provides a practical and invaluable steering wheel for agile leaders and their teams. Drawing on his extensive experience helping leaders drive more value from agile, Koning offers a comprehensive toolkit for continuously

improving your environment, including structures, metrics, meeting techniques, and governance for creating thriving teams that build disruptive products and services. Koning thoughtfully explains how to lead agile teams at large scale and how team members fit into both the team and the wider organization. Architect environments that help teams learn, grow, and flourish for the long term Get timely feedback everyone can use to improve Co-create goals focused on the customer, not the internal organization Help teams brainstorm and visualize the value of their work to the customer Facilitate team ownership and accelerate team learning Support culture change, and design healthier team habits Make bigger changes faster This actionable guide is for leaders at all levels—whether you're supervising your first agile team, responsible for multiple teams, or lead the entire company.
