Times of the Technoculture explores the social and cultural impact of new technologies, tracing the origins of the information society from the coming of the machine with the industrial revolution to the development of mass production techniques in the early twentieth century. The authors look at how the military has controlled the development of the information society, and consider the centrality of education in government attempts to create a knowledge society. Engaging in contemporary debates surrounding the internet, Robins and Webster question whether it can really offer us a new world of virtual communities, and suggest more radical alternatives to the corporate agenda of contemporary technologies.

their college courses and classes they will later teach. This text's coverage begins with Euclid's Elements, lays out a system of axioms for geometry, and then moves on to neutral geometry, Euclidian and hyperbolic geometries from an axiomatic point of view, and then non-Euclidean geometry. Good proof-writing skills are emphasized, along with a historical development of geometry. The Second Edition streamlines and reorganizes material in order to reach coverage of neutral geometry as early as possible, adds more exercises throughout, and facilitates use of the open-source software Geogebra. This text is ideal for an undergraduate course in axiomatic geometry for future high school geometry teachers, or for any student who has not yet encountered upper-level math, such as real analysis or abstract algebra. It assumes calculus and linear algebra as prerequisites.

one mathematician, Morris Kline, discovered illogicality of development of mathematics. Despite this, he attempted to justify illogicality in math by fruitfulness of usage of mathematics in physics, instead to stay problem about illogical development of physics. Here is discussing inconsistencies of undefined notions which are reasons of paradoxes. Main initial notion of mathematics is notion of infinity, and it has inconsistency and this inconsistency is distributed to derived notions of infinitesimal and continuity. Those notions related to almost all branches of mathematics which used physics. Also in work is considering miss inconsistencies of Euclid's and non-Euclid's geometries. A lot approaches like "physics is geometry or geometry is physics" was and is ignoring those inconsistencies of geometries.

Lord Rutherford has said that all science is either physics or stamp collecting. On that basis the study of forest biomass must be classified with stamp collecting and other such pleasurable pursuits. Japanese scientists have led the world, not only in collecting basic data, but in their attempts to systematise our knowledge of forest biomass. They have studied factors affecting dry matter production of forest trees in an attempt to approach underlying physical principles. This edition of Professor Satoo's book has been made possible the help of Dr John F. Hosner and the Virginia Poly technical Institute and State University who invited Dr Satoo to Blacksburg for three months in 1973 at about the time when he was in the final stages of preparing the Japanese version. Since then the explosion of world literature on forest biomass has continued to be fired by increasing shortages of timber supplies in many parts of the world as well as by a need to explore renewable sources of energy. In revising the original text I have attempted to

maintain the input of Japanese work - much of which is not widely available outside Japan - and to update both the basic information and, where necessary, the conclusions to keep them in tune with current thinking. Those familiar with the Japanese original will find Chapter 3 largely rewritten on the basis of new work - much of which was initiated while Dr Satoo was in Blacksburg.

The energy residue of forest residues such as unmerchantable tops and limbs left on site following conventional timber harvesting operations is widely recognized. Development in full-tree harvesting and the use of single-stem delimiters now offer opportunities for recovering logging residues directly at roadside. This study evaluated the efficiency and economics of chipping logging residues at roadside using mobile chipper-forwarders and trailer-mounted chippers and investigated the economics of transporting the energy chips to the end users' facilities. The report presents case studies of three biomass chipping operations. For each operation, a description of the equipment and working techniques used, characteristics of the study area and debris, and results of a short-term evaluation are presented. A transportation model is used to estimate transportation cost and a break-even price analysis is provided to estimate the cost of chips delivered at the end-user facility for varying transportation distances.

Public concern for the conservation of natural resources and a general awareness of the environmental consequences of waste disposal is reflected in current legislation aimed at reducing waste. Recycling is commonly cited as one of the preferred methods of waste reduction and this book summarizes a recent study of paper recycling in Europe, which investigated the entire production and disposal process using a life-cycle methodology. The results of the study underline the economic and environmental advantages of paper recycling, but more controversially, they also show how, under certain conditions, the renewable character and the high energy content of paper seem to make energy recovery more attractive than recycling.
