The Challenge Built to Last, the defining management study of the nineties, showed how great companies triumph over time and how long-term sustained performance can be engineered into the DNA of an enterprise from the very beginning. But what about the company that is not born with great DNA? How can good companies, mediocre companies, even bad companies achieve enduring greatness? The Study For years, this question preyed on the mind of Jim Collins. Are there companies that defy gravity and convert long-term mediocrity or worse into long-term superiority? And if so, what are the universal distinguishing characteristics that cause a company to go from good to great? The Standards Using tough benchmarks, Collins and his research team identified a set of elite companies that made the leap to great results and sustained those results for at least fifteen years. How great? After the leap, the good-to-great companies generated cumulative stock returns that beat the general stock market by an average of seven times in fifteen years, better than twice the results delivered by a composite index of the world's greatest companies, including Coca-Cola, Intel, General Electric, and Merck. The Comparisons The research team contrasted the good-to-great

companies with a carefully selected set of comparison companies that failed to make the leap from good to great. What was different? Why did one set of companies become truly great performers while the other set remained only good? Over five years, the team analyzed the histories of all twenty-eight companies in the study. After sifting through mountains of data and thousands of pages of interviews, Collins and his crew discovered the key determinants of greatness -- why some companies make the leap and others don't. The Findings The findings of the Good to Great study will surprise many readers and shed light on virtually every area of management strategy and practice. The findings include: Level 5 Leaders: The research team was shocked to discover the type of leadership required to achieve greatness. The Hedgehog Concept (Simplicity within the Three Circles): To go from good to great requires transcending the curse of competence. A Culture of Discipline: When you combine a culture of discipline with an ethic of entrepreneurship, you get the magical alchemy of great results. Technology Accelerators: Good-to-great companies think differently about the role of technology. The Flywheel and the Doom Loop: Those who launch radical change programs and wrenching restructurings will almost certainly fail to make the leap. "Some of the key concepts discerned in the study," comments Jim Collins, "fly in the face

of our modern business culture and will, quite frankly, upset some people.” Perhaps, but who can afford to ignore these findings?

Based on the author's extensive experience as a working planner, this book gives readers an insider's view of sub-state urban planning--the nitty-gritty details on the interplay of politics, law, money, and interest groups. The author takes a balanced, non-judgmental approach to introduce a range of ideological and political perspectives on the operation of political, economic, and demographic forces in city planning. Unlike other books on the subject, this one is strong in its coverage of economics, law, finance, and urban governance. It examines the underlying forces of growth and change and discusses frankly who benefits and loses by particular decisions. A four-part organization covers the background and development of contemporary planning; the structure and practice of contemporary planning; fields of planning; and national planning in the United States and other nations, and planning theory. For individuals headed for a career in planning.

Book & CD. To improve on an award-winning book poses a major challenge to its authors. The authors of this book took the challenge head-on by conducting a major research study to determine what exactly the outcomes are that managers at different levels must deliver in contemporary organisations in South Africa, and the rest of Africa. The findings of this study, which dealt with current and near-future management issues, as well as classical and contemporary thinking about management, were used as the blueprint for the updating of this book. After placing management in context, the authors deal with the knowledge, skills

and dispositions required of managers to perform the management functions of planning, organising, leading and controlling in a volatile business world. Examples of how the functions are applied in practice are cited throughout the book. These examples refer mainly to South African organisations and situations that managers in South Africa, and Africa, have to deal with to create and sustain a competitive advantage for their organisations. The book endeavours to break down the silo effect of seeing the management functions as separate activities. This is done by continuously placing the management function at hand in a bigger context. This enables learners of management to assess the implications of management decisions on different people, processes, systems and so on that make up the organisation.

much more clearly. Anarchism is a theory of organizing, and in times when global capitalism is in question, we need new ideas more than ever. The reader of this book will learn how anarchist ideas are relevant to today's management problems. In a series of student friendly short chapters on contemporary topics, the authors challenge the common sense that has allowed particular forms of organization and market to become globally dominant. Do we always need leaders? Is technological change always a good thing? Are markets the best way to arrange forms of exchange? This challenging book is essential for anyone who wants to understand what is wrong with business school theory, and what we might do about it. For students and teachers of management, the standard textbook reproduces the dominant ideas about the way that business should be done. This book turns those ideas on their head, asking awkward questions about authority, technology and markets, and demanding that its readers think hard about whether they want to reproduce those ideas too. Students of management, like everyone else, know that the current global system is broken but they don't know what they can do about it. This unique book uses two hundred years of anarchist ideas to give readers a clear guide for building the organizations and businesses of the future, and places choice and responsibility at the centre of making a new world for people and planet"--
