Digital forensics deals with the acquisition, preservation, examination, analysis and presentation of electronic evidence. Networked computing, wireless communications and portable electronic devices have expanded the role of digital forensics beyond traditional computer crime investigations. Practically every crime now involves some aspect of digital evidence; digital forensics provides the techniques and tools to articulate this evidence. Digital forensics also has myriad intelligence applications. Furthermore, it has a vital role in information assurance -- investigations of security breaches yield valuable information that can be used to design more secure systems. Advances in Digital Forensics X describes original research results and innovative applications in the discipline of digital forensics. In addition, it highlights some of the major technical and legal issues related to digital evidence and electronic crime investigations. The areas of coverage include: - Internet Crime Investigations; - Forensic Techniques; - Mobile Device Forensics; - Forensic Tools and Training. This book is the 10th volume in the annual series produced by the International Federation for Information Processing (IFIP) Working Group 11.9 on Digital Forensics, an international community of scientists, engineers and practitioners dedicated to advancing the state of the art of research and practice in digital forensics. The book contains a selection of twenty-two edited papers from the 10th Annual IFIP WG 11.9 International Conference on Digital Forensics, held in Vienna, Austria in the winter of 2014. Advances in Digital Forensics X is an important resource for researchers, faculty members and graduate students, as well as for practitioners and individuals engaged in research and development efforts for the law enforcement and intelligence communities.

IT technology engineering changes everyday life, especially in Computing and Communications. The goal of this book is to further explore the theoretical and practical issues of Future Computing and Communications. It also aims to foster new ideas and collaboration between researchers and practitioners.

This valuable reference presents the "going" royalty rate for virtually any product, including over 1,500 products and services in ten lucrative categories--art, celebrity, character and entertainment, collegiate, corporate, designer, event, sports, nonprofit and music. The essential reference for both beginning and more experienced licensing professionals. Knowing the "going" royalty rate for virtually any product is as simple as reaching for the newly published Licensing Royalty Rates, 2021 Edition . Setting a royalty rate too high can scare away potential licensees, while accepting a lower rate can cost licensors hundreds of thousands of dollars. Licensing Royalty Rates, 2021 Edition provides all the information you need to calculate the right rate every time. The data in Licensing Royalty Rates is compiled using information from the U.S. Patent and Trademark Office. After careful review by a blue-ribbon panel of expert licensing consultants uniquely qualified to know what the appropriate rate range is for specific properties in each licensing category, the information is organized into four time-saving sections that give researchers fast access to comprehensive statistical and analytical data: Royalty rate listing alphabetically by licensed product --provides a detailed alphabetical listing of products and their suggested rate range across all product categories. Royalty rate listing by international trademark class--lets you quickly identify subtle royalty rate differences between similar products within specific international trademark classes. Checklist of licensed products and services--offers a quick-reference to products with a high potential for licensing. Comprehensive list of licensed products and services--presents a detailed list of all surveyed products and services within a trademark class for preparing intent-to-use trademark applications. This detailed information gives both beginning and more experienced licensing professionals the confidence needed to negotiate the maximum allowable rate regardless of the product, the market and the parameters of the specific deal itself. Although research on business model innovation is flourishing internationally, many important questions on the 'how', 'what', and 'when' of this process remain largely unanswered, particularly in regard to the role of top management. This book answers some of those pressing questions by taking a deliberately managerial perspective. Based on new and original findings derived from a survey among firms from various industries, and several case studies (including DSM, NXP Semiconductors, Randstad, and TomTom), the authors provide new insights into how and when managers can change a firm's business model. They turn their attention particularly to one key question: is it better to replicate existing models or develop new ones? Business model renewal is regarded as being especially vital in highly competitive environments. Nonetheless, whatever the environment, high levels of both replication and renewal will be key for a firm to succeed. The book looks at four levers that can be used by managers to innovate their business model: management itself, organizational structure, technology, and co-creation with external parties. It discusses the individual effects of these levers on business model replication and renewal. It also analyses specific combinations that strengthen business model innovation, including those which are technology oriented, internally oriented, externally oriented, and those which combine all of the levers in an integrated way.

The technology field has become a key driver of the world economy. Companies like Apple, Google, Microsoft, and Facebook are not only iconic organizations, but their founders are often legends in their own right. However, the ethnic and gender make-up of these companies are overwhelmingly reflections of their founders: white males. Anjuan Simmons has worked in the technology industry for 20 years as a software developer, infrastructure architect, and software project manager. His experiences as a minority in the technology industry inspired him to describe them on his blog. *Minority Tech* is a curated, edited, and augmented selection of those blog entries. The titles covered include: *The New Negro Problem, America and the Loss of the Black Genius, A Code of Conduct for Black Men, Why I Believe in Affirmative Action, What the world Needs from Trayvon Martin, 3 Reasons Why the Technology Industry Needs More Diversity, What Facebook Taught Me about Rape Prevention*, and more.

The third edition of *Nutrition in Exercise and Sport* has been updated and expanded to include the latest developments in the field. This publication is the second in the Research in Design series. Design is an effort that enjoys a growing attention in the academic world. At Delft University of Technology design is a recognized part of science. Like other technical universities, Delft is rooted in the engineering field. And in spite of questions like 'what is design', 'what is engineering' and 'what is science', which can be debated in long sessions, and differences that are hard to explain, it is possible to feel the differences. In this book the authors contribute to the development of a design language for the service domain. In general the engineering discipline is expanding into a field that embraces perspectives of more disciplines and actors, next to the engineer who is responsible for the artefact. The first volume in this Research in Design Series stresses the stakeholder oriented approach in the domain of architecture and urban planning (Binnekamp, van Gunsteren, & van Loon, 2006). The domain in this volume is services. This is a field in which the involvement of different stakeholders with different interests in the design process is particularly a critical success factor. A note on the second edition: improvements have been made to the text and illustrations. Apart from that the first and second edition are interchangeable.

Maximizing reader insights into the interactions between game theory, excessive crowding and safety and security elements, this book establishes a new research angle by illustrating linkages between different research approaches and through laying the foundations for subsequent analysis. Congestion (excessive crowding) is defined in this work as all kinds of flows; e.g., road/sea/air traffic, people, data, information, water, electricity, and organisms. Analysing systems where congestion occurs – which may be in parallel, series, interlinked, or interdependent, with flows one way or both ways – this book puts forward new congestion models, breaking new ground by introducing game theory and safety/security into proceedings. Addressing the multiple actors who may hold different concerns regarding system reliability; e.g. one or several terrorists, a government, various local or regional government agencies, or others with stakes for or against system reliability, this book describes how governments and authorities may have the tools to handle congestion, but that these tools need to be improved whilst additionally ensuring safety and security against various threats. This game-theoretic analysis sets this book apart from the current congestion literature and ensures that the book will be of use to postgraduates, researchers, 3rd/4th-year undergraduates, policy makers, and practitioners.

Transformative Strategies is based around the idea that strategic thinking is critical for organizational success in today's environment. The financial crisis, continuing economic uncertainty, digitalization, environmental issues, and social issues involved in globalization present strategic problems for enterprises. Unlike other textbooks that take a standard solutions-based approach, Transformative Strategies provides readers with a way to develop strategies that fit their own complex situations and shows how models may be applied in different ways to different problems. Each of the four key elements affecting the business environment (globalization, disruption, collaboration, and responsibility) are addressed as a set of tensions in eight areas: global competition, business model innovation, digital strategizing, business eco-systems, corporate social responsibility, top management teams, and trans-cultural leadership in a globalized world. This tension-based pedagogy enables readers to shift from dichotomized thinking (such as exploring or exploiting) to transformative thinking (such as exploring and exploiting; exploring through exploiting) and readers are challenged to solve real problems that companies face, encouraging them to acknowledge the broader context in which organizations operate and to analyze the problem from multiple perspectives. Each chapter is structured to aid engagement and discussion, including a discussion of the tension tied to the chapter's topic, learning objectives, theoretical frameworks, real life case studies, exercises and reflective questions. A highly practical book that encourages readers to develop solutions that fit their own complex problems, it will be particularly suitable for those studying strategic management as part of an MBA, MA or MSc in Management, as well as those in executive education. It will also appeal to all those interested in learning how to lead and transform organizations towards impact, purpose and relevance. Online resources include discussions of the case studies, supplementary problems for class discussion, and an instructors' manual outlining the pedagogical approach.

The service process design landscape is changing, with many of the previous limitations disappearing on how and by whom services are delivered. Opportunities for new service design configurations are being supported, to a large extent, by technology-enabled innovations; many tasks previously performed by the service provider may now be performed by either the customer or the service provider. As a result, customers are playing a more active role in the service process, not only through self-service but also through providing information to the service provider to create a more personalized service experience. Designing Service Processes to Unlock Value explores how service processes can be designed to leverage the expanding range of opportunities for service providers and customers to co-create value. Readers will learn about frameworks for value Co-Creation and models for designing all types of service processes, as well as the unique challenges of designing knowledge-intensive services. The book concludes with approaches to unlock these capabilities-and further boost value Co-Creation. This second edition includes new and updated examples of technology-enabled innovations that provide unprecedented flexibility in

service process design and continue to transform how service providers and customers co-produce services. At the same time, readers will see how these innovations can have important-and sometimes surprising-impacts on the nature of the benefit and cost tradeoffs and synergies that determine value Co-Creation.

Contemporary American society, with its emphasis on mobility and economic progress, all too often loses sight of the importance of a sense of "place" and community. Appreciating place is essential for building the strong local communities that cultivate civic engagement, public leadership, and many of the other goods that contribute to a flourishing human life. Do we, in losing our places, lose the crucial basis for healthy and resilient individual identity, and for the cultivation of public virtues? For one can't be a citizen without being a citizen of some place in particular; one isn't a citizen of a motel. And if these dangers are real and present ones, are there ways that intelligent public policy can begin to address them constructively, by means of reasonable and democratic innovations that are likely to attract wide public support? *Why Place Matters* takes these concerns seriously, and its contributors seek to discover how, given the American people as they are, and American economic and social life as it now exists—and not as those things can be imagined to be in some utopian scheme—we can find means of fostering a richer and more sustaining way of life. The book is an anthology of essays exploring the contemporary problems of place and placelessness in American society. The book includes contributions from distinguished scholars and writers such as poet Dana Gioia (former chairman of the National Endowment for the Arts), geographer Yi-Fu Tuan, urbanist Witold Rybczynski, architect Philip Bess, essayists Christine Rosen and Ari Schulman, philosopher Roger Scruton, transportation planner Gary Toth, and historians Russell Jacoby and Joseph Amato.

The automobile is going through the biggest transformation in its history. Automation and electrification of vehicles are expected to enable safer and cleaner mobility. The prospects and requirements of the future automobile affect innovations in major technology fields like driver assistance systems, vehicle networking and drivetrain development. Smart systems such as adaptive ICT components and MEMS devices, novel network architectures, integrated sensor systems, intelligent interfaces and functional materials form the basis of these features and permit their successful and synergetic integration. It has been the mission of the International Forum on Advanced Microsystems for Automotive Applications (AMAA) for more than fifteen years to detect novel trends and to discuss the technological implications from early on. Therefore, the topic of the AMAA 2014 will be "Smart Systems for Safe, Clean and Automated Vehicles". This book contains peer-reviewed papers written by leading engineers and researchers which all address the ongoing

research and novel developments in the field.
