A Humancentric Approach to a Technological Innovation

THIS IS NOT SIMPLY A BOOK ABOUT TECHNOLOGY. IT IS A BOOK ABOUT THE INCREASING ROLE HUMANITY MUST PLAY DURING THIS TECHNOLOGICAL REVOLUTION IN ORDER TO THRIVE, NOT JUST SURVIVE. ?

In *The transHuman Code*, authors Carlos Moreira and David Fergusson ask, "Are we building a better future for humanity with the help of magnificent technology or could we instead be building a future with better technology at the expense of humanity?" In proclaiming the obvious, that the human is and will always be the greatest and most advanced technology the world has ever known, the authors ask, "Doesn't it then make the most sense to place the understanding, improvement, and utilization of humanity as today's highest priority?" *The transHuman Code* is a book of conversations about how we employ the power of technology to script the best future possible. By introducing you to some of the world's most important innovators and dynamic developments occurring today, giving you a clearer understanding of their implications and then sparking the conversations that need to happen as a result, the hope is that together we will develop a transHuman code that will allow us to remain both the apex and axis of all technological progress from here forward. How we do this today is new territory. Dynamic innovative opportunities are here, or very near, for the taking. Which ones should we pursue and why? *The transHuman Code* introduces, through an address of the core elements of our life ecosystem, the discussions we must have. Together, both readers and contributors will form

collective, proactive answers in this interactive process. You are invited to join Moreira and Fergusson, through this groundbreaking book, to begin this important work together. Singapore's leading tech magazine gives its readers the power to decide with its informative articles and in-depth reviews.

The X-ray equipment maintenance and repairs workbook is intended to help and guide staff working with, and responsible for, radiographic equipment and installations in remote institutions where the necessary technical support is not available, to perform routine maintenance and minor repairs of equipment to avoid break downs. The book can be used for self study and as a checklist for routine maintenance procedures.

This book evaluates the conditions for the international transfer of Japanese-style management and production techniques to Europe. Using an investigation of Japanese manufacturing companies with operations in Europe, the authors shed light on 'hybrid factories', which combine elements of Japanese and European management and production techniques.
