A symposium and celebration was held at Aberdeen Proving Ground (APG), Maryland, in November 1996, to recognize and commemorate seminal Army contributions to the birth and development of modern computing. Primarily inspired by the 50th anniversary of the invention of the world's first general purpose electronic computer (the ENIAC), this two-day event also celebrated the dedication at APG of significant new computational resources provided by the Office of Secretary of Defense. On this occasion, scores of computing pioneers gathered at APG to reminisce about the accomplishments that stemmed from the Army's computation needs during World War II in particular, the need for the firing and bombing tables that were essential for accurate targeting of ground- and air-delivered ordnance.

Hidden in the mountains of East Tennessee, an eleven-year old goes about the business of being a boy during the summer of 1970. Within a balance of terror and innocence, he bears silent witness to ghosts of the dead and the cruelties of a teenage killer while local justice plays out in a community carved from legacies of coal mining and religion. Turbomachines, which comprise turbines, compressors and fans, are used in electricpower generation, aircraft propulsion and a wide variety of medium and heavy industries. The importance of this class of machines can be understood by the examples of 2000 MW steam turbines, turbojet engines, etc. This book is a self-contained treatise in the theory, design and application of turbomachines. The book deals with the use of turbomachines in air handling, power generation,

aircraft propulsion and several industrial applications. It covers the basic theory and working of all kinds of turbomachines. In addition, the book discusses:

- * The role of individual turbomachines in a plant
- * Dimensional analysis and flow through cascades
- * Fans, blowers, high-temperature turbine stages and aerospace engineering
- * Problems on hydraulic turbines and pumps

Written to provide information on all price ranges of equipment to everyone from the beginner to the experienced home theater owner, *Build Your Own Home Theater* has been completely updated for today's audience. This new edition contains valuable consumer information on the latest digital home theater components and technology, including digital surround sound receivers, DVD players, digital television & HDTV, digital satellites (DBS), digital camcorders, and digital hard-drive video recorders. It also features easy-to-understand explanations of surround sound technology and set ups-including Dolby Digital, THX Surround EX™, and DTS-ES™. If you are interested in audio, video, and home theater technologies, this book will give you the information you need to choose the right components, hook the pieces together, and create a fabulous theater experience right in your own living room. When the first edition of *Build Your Own Home Theater* was published, decent home theater systems were primarily only affordable for wealthier consumers. Now, several years later, the technology is accessible to millions of homes as products such as wide-screen televisions, digital surround sound audio, DVD Video and Audio Players, and digital satellite systems have become commonplace. Though most people don't have actual home theater set-ups in their living rooms, more and more consumers are trying to combine components they already own with new high-tech components to create an affordable home theater experience. industry practitioners, *Bioseparations Science and Engineering* fills a critical need in the field of bioseparations. Current, comprehensive, and concise, it covers bioseparations unit operations in unprecedented depth. In each of the chapters, the authors use a consistent method of explaining unit operations, starting with a qualitative description noting the significance and general application of the unit operation. They then illustrate the scientific application of the operation, develop the required mathematical theory, and finally, describe the applications of the theory in engineering practice, with an emphasis on design and scaleup. Unique to this text is a chapter dedicated to bioseparations process design and economics, in which a process simulator, SuperPro Designer® is used to analyze and evaluate the production of three important biological products. New to this second edition are updated discussions of moment analysis, computer simulation, membrane chromatography, and evaporation, among others, as well as revised problem sets. Unique features include basic information about bioproducts and engineering analysis and a chapter with bioseparations laboratory exercises. *Bioseparations Science and Engineering* is ideal for students and professionals working in or studying bioseparations, and is the premier text in the field.

We all have opinions about the television shows we watch, but television criticism is about much more than simply evaluating the merits of a particular show and deeming it 'good' or 'bad.' Rather, criticism uses the close examination of a television program to explore that program's cultural significance, creative strategies, and its place in a broader social context. *How to Watch Television* brings together forty original essays from today's leading scholars on television culture, writing about the programs they care (and think) the most about. Each essay focuses on a particular television show, demonstrating one way to read the program and, through it, our media culture. The essays model how to practice media criticism in accessible language, providing critical insights through analysis—suggesting a way of looking at TV that students and interested viewers might emulate. The contributors discuss a wide range of television

programs past and present, covering many formats and genres, spanning fiction and non-fiction, broadcast and cable, providing a broad representation of the programs that are likely to be covered in a media studies course. While the book primarily focuses on American television, important programs with international origins and transnational circulation are also covered. Addressing television series from the medium's earliest days to contemporary online transformations of television, *How to Watch Television* is designed to engender classroom discussion among television critics of all backgrounds. In 2012, in Norway, Anders Behring Breivik was convicted of mass murder, causing a fatal explosion, and terrorism. In the same year in nearby Sweden notorious racist serial killer, Peter Mangs, was sentenced to life for two murders, a series of attempted murders and scores of shootings in Malmö between 2003 and 2010. What has led to these murderous hate crimes in such highly developed and civilized countries? This book is based on a series of exclusive interviews with Peter Mangs, Anders Breivik and other perpetrators and instigators of hate crime as well as fieldwork among Muslims and anti-Muslims in Scandinavia and the USA, as well as more than a hundred interviews with hate crime targets, and an in-depth analysis of anti-Muslim propaganda material.
