catastrophe occurs. This is even more true today. Survival Guns became the standard in its own time and went through several printings. When it finally went out of print, it graduated from a classic to a sought-after collector's item, because the principles and advice in this well-reasoned volume are sound and perennially valuable. Some new guns and some new calibers have become available since this book was first published, but its principles, advice, and value remain unchanged. Having more choices only increases the value of advice on how to choose what is best for you. As used copies of this book became harder and harder to find, Paladin received numerous requests to bring Tappan's classic back into print. We are pleased to make the most well-known survival firearms book ever published available once more to a new generation of concerned citizens facing the same threats Tappan chronicled during his lifetime. Survival Guns remains the definitive book for anyone interested in the practical use of firearms and related weapons for defense, food gathering, and predator and pest control under conditions of long-term, self-sufficient living.

In 1990 the Beretta M9 replaced the venerable Colt 1911 as the main pistol of choice for the US Army. At the time the decision was controversial particularly because it was perceived that a smaller caliber weapon such as the Beretta would lack the necessary stopping power and range in comparison to the .45 caliber Colt. The situation was not helped by the rumour that the adoption of this Italian designed pistol was in exchange for the creation of US missile bases within Italy. Nonetheless, the Beretta, although not a perfect pistol, has since proved many of its detractors wrong with widespread use in Iraq and Afghanistan. This document summarizes the main findings and implications of the first empirical study investigating the scale and scope of arms trafficking on the dark web, which was conducted by RAND Europe and the University of Manchester from September 2016 to July 2017. There is an ongoing debate over the extent to which online black markets on the so-called "dark web," the part of the Internet not searchable by traditional search engines and hidden behind anonymity software, facilitate arms trafficking.

Details have emerged in the media following the Munich shooting in 2016 linking the weapons used by the attacker to vendors on dark web marketplaces (also known as cryptomarkets). Some media reports have also linked the Paris terrorist attacks in November 2015 to these platforms. While these reports appear to have raised concerns about the role of such dark web markets in arms trade, evidence on the subject is largely anecdotal, based on secondary data as reported after events such as terrorist attacks or successful law enforcement
