This work presents a re-analysis of a major segment of the paradigm of the Serbo-Croatian verb. It concentrates chiefly on the perfective and imperfective morphology, but treats this classic problem in Slavic scholarship from a non-aspectual point of view. Literaturverz. S. 436 - 447. Helpman explains what shapes international production and distribution of goods and the resulting trade flows, and provides a clear, original account of the trade-theory revolutions of the 1980s and the post-recession. Though it contains no equations, *Understanding Global Trade* is mathematical in its elegance, precision, and power of expression.

Environment and human habitation have become principal topics of research with the growing interest in the Black Sea region in antiquity. This book highlights their interaction around all the coasts of the region, from different perspectives and disciplines. Here, archaeological excavation and survey combine with studies of classical texts, cults, medicine, and more, to explore ancient experiences of the region. Accordingly, the region is examined from external viewpoints, centred in the Mediterranean (Herodotus, the Hippocratics, ancient geographers, and poets), and through local lenses, particularly supplied by archaeology. While

familiar disconnects emerge, there is also a striking coherence in the results of these different pathways into the study of local environments, which embrace not only Graeco-Roman settlement, but also a broader range of agricultural and pastoralist activities across a huge landscape which stretches as far afield as ancient Hungary. Throughout, there are methodological implications for research elsewhere in the ancient world. This book shows people in landscapes across a huge expanse, in local reality and in external conceptions, complete with their own agency, ideas, and lifestyles.

This book provides a review of the principles and methods of drainage with an emphasis on design. The whole field of drainage is covered, and although the book concentrates mainly on the practice in North America, Europe and Britain, the practice in developing countries is also included. The book is directed primarily at the graduate engineer entering professional practice, but will also provide a useful reference for more senior engineers and for those in adjunct professions. Chapter 1 outlines the necessity for drainage on a large or small scale, for rural and urban areas. As the drainage engineer must decide how much unwanted water there will be and when it will occur, the chapter discusses climatic types, prediction of rainfall, evapotranspiration effects, return periods (of design storms and runoff events), river flow and flood prediction, and various sensing systems for providing short term predictions of rainfall, runoff, streamflow and flood warning. Chapter 2 gives a thorough review of the properties of soil in the context of drainage design. The extensive mathematical theories which relate to the crucial area of soil water movement are outlined and due attention is paid to the growing importance of predicting soil water movement in partially saturated soils.

Using entertaining examples of the mind in action, an eminent psychologist explores current scientific theories of the mind and shows how consciousness works like a stage in which thoughts and perceptions are examined by an inner audience. UP.

Atypical social behaviour and the importance of routine are explained, as well as considering relationships, emotions

and mental health. Packed with exercises and case vignettes to help you to get to know the person you are supporting better, there is also a trouble-shooting section at the end of each chapter with practical solutions for tackling common problems. *Working with Adults with Asperger Syndrome - A Practical Toolkit* offers an easy-to-use, person-centred approach, which will prove a valuable resource for families, friends and a wide range of professionals involved in supporting an adult with AS.

Determinants of health - like physical activity levels and living conditions - have traditionally been the concern of public health and have not been linked closely to clinical practice. However, if standardized social and behavioral data can be incorporated into patient electronic health records (EHRs), those data can provide crucial information about factors that influence health and the effectiveness of treatment. Such information is useful for diagnosis, treatment choices, policy, health care system design, and innovations to improve health outcomes and reduce health care costs. *Capturing Social and Behavioral Domains and Measures in Electronic Health Records: Phase 2* identifies domains and measures that capture the social determinants of health to inform the development of recommendations for the meaningful use of EHRs. This report is the second part of a two-part study. The Phase 1 report identified 17 domains for inclusion in EHRs. This report pinpoints 12 measures related to 11 of the initial domains and considers the implications of incorporating them into all EHRs. This book includes three chapters from the Phase 1 report in addition to the new Phase 2 material. Standardized use of EHRs that include social and behavioral domains could provide better patient care, improve population health, and enable more informative research. The recommendations of *Capturing Social and Behavioral Domains and Measures in Electronic Health Records: Phase 2* will provide valuable information on which to base problem identification, clinical diagnoses, patient treatment, outcomes assessment, and population health measurement.

Family caregiving affects millions of Americans every day, in all walks of life. At least 17.7 million individuals in the United States are caregivers of an older adult with a health or functional limitation. The nation's family caregivers provide the lion's share of long-term care for our older adult population. They are also central to older adults' access to and receipt of health care and community-based social services. Yet the need to recognize and support caregivers is among the least appreciated challenges facing the aging U.S. population. Families Caring for an Aging America examines the prevalence and nature of family caregiving of older adults and the available evidence on the effectiveness of programs, supports, and other interventions designed to support family caregivers. This report also assesses and recommends policies to address the needs of family caregivers and to minimize the barriers that they encounter in trying to meet the needs of older adults.

The goal of eliminating disparities in health care in the United States remains elusive. Even as quality improves on specific measures, disparities often persist. Addressing these disparities must begin with the fundamental step of bringing the nature of the disparities and the groups at risk for those disparities to light by collecting health care quality information stratified by race, ethnicity and language data. Then attention can be focused on where interventions might be best applied, and on planning and evaluating those efforts to inform the development of policy and the application of resources. A lack of standardization of categories for race, ethnicity, and language data has been suggested as one obstacle to achieving more widespread collection and utilization of these data. Race, Ethnicity, and Language Data identifies current models for collecting and coding race, ethnicity, and language data; reviews challenges involved in obtaining these data, and makes recommendations for a nationally standardized approach for use in health care quality improvement.

NEW YORK TIMES BESTSELLER • “As sweet and funny and sad and true and heartfelt a memoir as one could find.” —from the foreword by Augusten Burroughs Ever since he was young, John Robison longed to connect with other people, but by the time he was a teenager, his odd habits—an inclination to blurt out non sequiturs, avoid eye contact, dismantle radios, and dig five-foot holes (and stick his younger brother, Augusten Burroughs, in them)—had earned him the label “social deviant.” It was not until he was forty that he was diagnosed with a form of autism called Asperger’s syndrome. That understanding transformed the way he saw himself—and the world. A born storyteller, Robison has written a moving, darkly funny memoir about a life that has taken him from developing exploding guitars for KISS to building a family of his own. It’s a strange, sly, indelible account—sometimes alien yet always deeply human. The original comic adaptation of the greatest space-fantasy film of all is remastered for the modern age with all-new coloring by Chris Sotomayor! Weeks before George Lucas’ first Star Wars film hit theatres, Marvel gave fans their first look at Luke Skywalker, boldly asking: “Will he save the galaxy, or destroy it?” You may know the answer, but that doesn’t spoil the fun of seeing Star Wars: Episode IV — A New Hope like never before including scenes that never made the silver screen! When Princess Leia is taken prisoner, Luke, Obi-Wan Kenobi, Han Solo, Chewbacca, C-3PO and R2-D2 ride to the rescue and take on Darth Vader in his awesome Death Star. Although the general public in the United States assumes children to be generally healthy and

thriving, a substantial and growing number of children have at least one chronic health condition. Many of these conditions are associated with disabilities and interfere regularly with children's usual activities, such as play or leisure activities, attending school, and engaging in family or community activities. In their most severe forms, such disorders are serious lifelong threats to children's social, emotional well-being and quality of life, and anticipated adult outcomes such as for employment or independent living. However, pinpointing the prevalence of disability among children in the U.S. is difficult, as conceptual frameworks and definitions of disability vary among federal programs that provide services to this population and national surveys, the two primary sources for prevalence data. Opportunities for Improving Programs and Services for Children with Disabilities provides a comprehensive analysis of health outcomes for school-aged children with disabilities. This report reviews and assesses programs, services, and supports available to these children and their families. It also describes overarching program, service, and treatment goals; examines outreach efforts and utilization rates; identifies what outcomes are measured and how they are reported; and describes what is known about the effectiveness of these programs and services.

Generally Accepted Accounting Principles (GAAP) are used as the basis for financial reporting. The original GAAP documents span thousands of pages, and so are difficult to research. The GAAP Guidebook solves this problem by condensing GAAP into a single volume. This book describes the key elements of each topic, how accounting information is disclosed, and where to look in the FASB Codification source documents for additional information. The text contains hundreds of practical examples that show how to apply GAAP to real-world situations, as well as sample journal entries and usage tips. In short, the GAAP Guidebook serves as a handy reference for accountants who need quick answers to difficult problems.

John Dupre warns that our understanding of human nature is being distorted by two faulty and harmful forms of pseudo-scientific thinking. Not just in the academic world but increasingly in everyday life, we find one set of experts seeking to explain the ends at which humans aim in terms of evolutionary theory, and another set of experts using economic models to give rules of how we act to achieve those ends. Dupre charges this unholy alliance of evolutionary psychologists and rational-choice theorists with scientific imperialism: they use methods and ideas developed for one domain of inquiry in others where they are inappropriate. He demonstrates that these theorists' explanations do not work, and furthermore that if taken seriously their theories tend to have dangerous social and political consequences. For these reasons, it is important to resist scientism - an exaggerated conception of what science can be expected to do for us. To say this is in no way to be against science - just against bad science. Dupre restores sanity to the

study of human nature by pointing the way to a proper understanding of humans in the societies that are our natural and necessary environments. He shows how our distinctively human capacities are shaped by the social contexts in which we are embedded. And he concludes with a bold challenge to one of the intellectual touchstones of modern science: the idea of the universe as causally complete and deterministic. In an impressive rehabilitation of the idea of free human agency, he argues that far from being helpless cogs in a mechanistic universe, humans are rare concentrations of causal power in a largely indeterministic world. *Human Nature and the Limits of Science* is a provocative, witty, and persuasive corrective to scientism. In its place, Dupre commends a pluralistic approach to science, as the appropriate way to investigate a universe that is not unified in form. Anyone interested in science and human nature will enjoy this book, unless they are its targets.
