Right from its formal introduction in India in 1835, through Thomas B. Macaulay's Minute, English has been intrinsically linked with the employment prospects of Indians. During their regime, the British promoted English education to fulfil the requirement of English-knowing Indians for administrative purposes. Owing to globalization, the last few years have witnessed the opening up of thousands of lucrative job opportunities for graduates proficient in English. English has gained importance in India as the language of opportunities. In colonial India, English education was a passport to government jobs, while in the twenty-first century, proficiency in English is essential for private sector jobs. This book examines the development of curricula in English in Indian universities vis-a-vis the needs of second language learners studying in Special English programmes of Bachelor of Arts (BA). It also reflects on how globalization has strengthened the connection between English and employment.

Many different words are used to deal with diversity in education, such as cross-cultural, meta-cultural, polycultural, multicultural and intercultural, as well as terms like global and international. Some are trendier than others, some more political. Some of these words are used in certain parts of the world, while others are rejected. This volume concentrates on the notion of the 'intercultural' and makes sense of its

polysemy in education. As such, in research and practice, my intercultural may not mean the same as your intercultural. My intercultural might have different values and ideologies than your intercultural. The contributors also propose considerations on how to make the most of 'renewed', critical and reflexive approaches to intercultural education in a breadth of contexts and countries, including Argentina, Australia, France, Iceland, Tunisia and the UK. The book will appeal to students and teachers, as well as to confirmed researchers who will gain inspiration and new insights into the increasingly contested notion of the 'intercultural' in education.

This book explores an area that has been somewhat overlooked in the literature to date – the current status and future trends of English education in Oman. It offers a variety of theoretical and methodological approaches to the subject and explores areas of English education in Oman that have, until now, been little investigated. It explores these issues from a variety of perspectives: the professionalization of English teachers in the country; the implementation of novel teaching methodologies, curricula, and assessment approaches, into what are, in many ways, still very traditional education settings; the integration of learner identity into English language instruction; country- and culture-specific concerns with conducting research with Omani participants; the strategic demands of building stronger links between education and workforce needs; and developing learner autonomy and motivation.

One of the most popular and widely read books of the Middle Ages, "Physiologus" contains allegories of beasts, stones, and trees both real and imaginary, infused by their anonymous author with the spirit of Christian moral and mystical teaching. Accompanied by an introduction that explains the origins, history, and literary value of this curious text, this volume also reproduces twenty woodcuts from the 1587 version. Originally composed in the fourth century in Greek, and translated into dozens of versions through the centuries, "Physiologus" will delight readers with its ancient tales of ant-lions, centaurs, and hedgehogs and their allegorical significance. An elegant little book . . . still diverting to look at today. . . . The woodcuts reproduced from the 1587 Rome edition are alone worth the price of the book. Raymond A. Sokolov, "New York Times Book Review"

The need for a cohesive and comprehensive curriculum that intentionally connects standards, instruction, and assessment has never been more pressing. For educators to meet the challenging learning needs of students they must have a clear road map to follow throughout the school year. Since the Renaissance, at least, the medium of sculpture has been associated explicitly with the sense of touch. Sculptors, philosophers and art historians have all linked the two, often in strikingly different ways. In spite of this long running interest in touch and tactility, it is vision and visuality which have tended to dominate art historical research in recent decades. This book introduces a new impetus to the discussion of the relationship between touch and sculpture by setting up a dialogue between art historians and individuals with fresh insights who are working in disciplines beyond art history. The collection brings together a rich and diverse set of approaches, with essays tackling subjects from prehistoric figurines to the work of contemporary artists, from pre-modern ideas about the physiology of touch to tactile interaction in the museum environment, and from the phenomenology of touch in recent philosophy to the experimental findings of scientific study. It is the first volume on this subject to take such a broad approach and, as such, seeks to set the agenda for future research and collaboration in this area.
