The biographies of flint objects reveal their various and changing roles in prehistoric life. Using raw material sourcing, technological analysis, experimental archaeology, microwear and residue studies the author tells the story of flint from the Early Neolithic to its virtual demise in the Late Bronze and Early Iron Age, incorporating data from settlements, burials and hoards from the region of the present-day Netherlands. This richly illustrated book shows the way flint functioned in daily life, how simple domestic tools became ritualized, how flint was used to negotiate change and how the biography of flint objects was related to personhood.

This book studies the industrial development of Japan since the mid-nineteenth century, with particular emphasis on how the various industries built technological capabilities. The Japanese were extraordinarily creative in searching out and learning to use modern technologies, and the authors investigate the emergence of entrepreneurs who began new and risky businesses, how the business organizations evolved to cope with changing technological conditions, and how the managers, engineers, and workers acquired organizational and technological skills through technology importation, learning-by-doing, and their own R & D activities. The book investigates the interaction between private entrepreneurial activities and public policy, through a general examination of economic and industrial development, a study of the evolution of management systems, and six industrial case studies: textile, iron and steel, electrical and communications equipment, automobiles, shipbuilding and aircraft, and pharmaceuticals. The authors show how the Japanese government has played an important supportive role in the continuing innovation, without being a substitute for aggressive business enterprise constantly venturing into unfamiliar terrains.

This book is intended for students and soil scientists who want to know about the state of the art in soil sciences in Chile. The book merges a comprehensive bibliographical review of the soil surveys carried out throughout the length and breadth of Chilean territory during the past 40 years and more recent information obtained by the authors in a number of field studies. As its starting point the book presents a general overview of important features related to Chilean soils, such as geology and geomorphology, climate, land use and vegetation. In this long and narrow country different soil formation factors and processes have resulted in a broad variety of soil bodies, from the extremely arid Atacama desert to the Patagonian and Antarctic zones. This book provides a description and classification (mainly Soil Taxonomy) of the most important soil types. Particularly important are soils derived from volcanic materials, which cover extensive areas of Chile. The book also deals with soil management topics in relation to the chemical, physical and biological properties of Chilean soils and it includes a number of examples from throughout the country. Finally, the book shows how man has induced severe soil degradation problems in Chile, such as erosive soil degradation, non-erosive soil degradation and land desertification.

This book provides a comprehensive historical treatment of the Latin liturgy in medieval England. Richard Pfaff constructs a history of the worship carried out in churches - cathedral, monastic, or parish - primarily through the surviving manuscripts of service books, and sets this within the context of the wider political, ecclesiastical, and cultural history of the period. The main focus is on the mass and daily office, treated both chronologically and by type, the liturgies of each religious order and each secular 'use' being studied individually. Furthermore, hagiographical and historiographical themes - respectively, which saints are prominent in a given witness and how the labors of scholars over the last century and a half have both furthered and, in some cases, impeded our understandings - are explored throughout. The book thus provides both a narrative account and a reference tool of permanent value.

After 35 years in power, Henry VIII was a bloated, hideously obese, black-humoured old man, rarely seen in public. He had striven all his life to ensure the survival of his dynasty by siring legitimate sons, yet his only male heir was eight-year-old Prince Edward. It was increasingly obvious that when Henry died, real power in England would be exercised by a regent. The prospect of that prize spurred the rival court factions into deadly conflict. Robert Hutchinson spent several years in original archival research. He advances a genuinely new theory of Henry's medical history and the cause of his death; he has unearthed some fabulous eyewitness material and papers from death warrants, confessions and even love letters between Katherine Parr and the Lord High Admiral.
