Jill Jennings' dream of becoming an elite runner turns into a nightmare when she breaks her leg less than a year before the Olympic trials. After two surgeries and a lengthy rehabilitation, she's ready to pursue her goal again. Or is she... Jill's healing and ready to hit the pavement, but her passion for the sport she'd planned to make her career unexpectedly wanes. On a whim, she changes course and runs right into tall, blonde, and gorgeous Tyler Bloodworth. Fly fisherman come and go in south central Colorado, but Ty's back for a second summer, minus his girlfriend and hotter than ever. Tyler Bloodworth's life plan to start a fly-fishing business with his dad back home in North Carolina is suddenly snagged when Jill Jennings runs circles around his heart during a summer stint as a fishing guide in Colorado. Back for a second summer, he sets his bait and casts his line, but Jill's not so easy to catch. A catch and release fisherman breaks Golden Rule #1: he hooks a girl he can't let go. A distance runner with big dreams and an uncertain future falls hard for a summer fling. Can Jill risk losing her career and her heart to Tyler when he'll be gone in a few months, or will Ty reel in the biggest catch of his life?

It can be stated with some justification that polymers, because of their mainly synthetic origins, are important because of their applications, perhaps more than in the case of more familiar and conventional materials such as metals and wood, which would exist apart from their use in human activities. The majority of polymers have been synthesized under the impetus of requirements for new and improved properties. The preparative routes to new polymers and blends, and the exploration of their structures and properties constitute absorbing subjects for study, but it is the final application of these materials in real, commercial products that provides the driving force for such developments. In recent years a number of excellent books have appeared which deal with the chemistry, structure, properties and engineering aspects of polymers. The processing of polymers, as products of the chemical industry, into engineering and consumer goods has received much less attention. There are some valuable texts for individual processes, especially the extrusion and injection moulding of thermoplastics, but others are less well served. This book provided a review of all the important processing routes for transforming polymers into products.

Before the voyage of Columbus in 1492, the Atlantic Ocean stood as a barrier to contact between the people (and their ideas and institutions), plants, animals, and microbes of Eurasia and Africa on the one hand and the Americas on the other. Following Columbus's voyage, the Atlantic turned into a conduit for transferring these things among the four continents bordering the ocean in ways that affected people living on each of them. The appearance of *The Atlantic World* marks an important achievement, for it stands out as the first successful attempt to combine the many strains of Atlantic history into a comprehensive, thoughtful narrative. At the core of this ground-breaking and eloquently written survey lies a consideration of the relationships among people living in Europe, Africa, and the Americas, with a focus on how these relationships played important roles—often the most important roles—in how the histories of the people involved unfolded. The ways of life of millions of people changed, sometimes for the better but often for the worse, because of their relationship to the larger Atlantic world. And unlike existing texts dealing with one or another aspect of Atlantic history, *The Atlantic World* does not subjugate the history of Africa and South America to those of the “British Atlantic” or Europe. With historians and other scholars beginning to reconceptualize the Atlantic World as a dynamic zone of exchange in which people, commodities, and ideas circulated from the mid-fifteenth century until the dawn of the twentieth century, the interconnections between people along the Atlantic rim create a coherent region, one in which events in one corner inevitably altered the course of history in another. As this book testifies, Atlantic history, properly understood, is history without borders—in which national narratives take backstage to the larger examination of interdependence and cultural transmission. Conceived of and produced by a team of distinguished authors with countless hours of teaching experience at the college level, this thoughtfully organized, beautifully written, and lavishly illustrated book will set the standard for all future surveys intended as a core text for the new and rapidly growing courses in Atlantic History.

*Affective Health and Masculinities in South Africa* explores how different masculinities modulate substance use, interpersonal violence, suicidality, and AIDS as well as recovery cross-culturally. With a focus on three male protagonists living in very distinct urban areas of Cape Town, this comparative ethnography shows that men's struggles to become invulnerable increase vulnerability. Through an analysis of masculinities as social assemblages, the study shows how affective health problems are tied to modern individualism rather than African 'tradition' that has become a cliché in Eurocentric gender studies. Affective health is conceptualized as a balancing act between autonomy and connectivity that after colonialism and apartheid has become compromised

through the imperative of self-reliance. This book provides a rare perspective on young men's vulnerability in everyday life that may affect the reader and spark discussion about how masculinities in relationships shape physical and psychological health. Moreover, it shows how men change in the face of distress in ways that may look different than global health and gender-transformative approaches envision. Thick descriptions of actual events over the life course make the study accessible to both graduate and undergraduate students in the social sciences. Contributing to current debates on mental health and masculinity, this volume will be of interest to scholars from various disciplines including anthropology, gender studies, African studies, psychology, and global health.
