Since 1971 competition has begun to replace regulation as a governing force in the telecommunications industry. The breakup of the national telephone monopolies, technological advances, and the worldwide network in telecommunications have brought a revolution in the telecommunications equipment and services industries. These changes have forced legislators and regulators to rethink public policy toward communications. The papers in this book were first presented at a conference organized by Robert Crandall and Kenneth Flamm, pulling together a group of industry professionals and scholars to address the far-reaching implications of the upheaval in the communications industry. The contributors analyze the effects of this increasing competition on standardization, technical innovation, and international rivalry. Changing the Rules offers possible policy options and analyzes their potential effects on the future market structure and the competitive positions of the U.S. computer and communications industries.

Image Analysis, Classification and Change Detection in Remote Sensing: With Algorithms for Python, Fourth Edition, is focused on the development and implementation of statistically motivated, data-driven techniques for digital image analysis of remotely sensed imagery and it features a tight interweaving of statistical and machine learning theory of algorithms with computer codes. It develops statistical methods for the analysis of optical/infrared and synthetic aperture radar (SAR) imagery, including wavelet transformations, kernel methods for nonlinear classification, as well as an introduction to deep learning in the context of feed forward neural networks. New in the Fourth Edition: An in-depth treatment of a recent sequential change detection algorithm for polarimetric SAR image time series. The accompanying software consists of Python (open source) versions of all of the main image analysis algorithms. Presents easy, platform-independent software installation methods (Docker containerization). Utilizes freely accessible imagery via the Google Earth Engine and provides many examples of cloud programming (Google Earth Engine API). Examines deep learning examples including TensorFlow and a sound introduction to neural networks, Based on the success and the reputation of the previous editions and compared to other textbooks in the market, Professor Canty's fourth edition differs in the depth and sophistication of the material treated as well as in its consistent use of computer codes to illustrate the methods and algorithms discussed. It is self-contained and illustrated with many programming examples, all of which can be conveniently run in a web browser. Each chapter concludes with exercises complementing or extending the material in the text.
