Data Mining and Multi agent Integration aims to reflect state of the art research and development of agent mining interaction and integration (for short, agent mining). The book was motivated by increasing interest and work in the agents data mining, and vice versa. The interaction and integration comes about from the intrinsic challenges faced by agent technology and data mining respectively; for instance, multi agent systems face the problem of enhancing agent learning capability, and avoiding the uncertainty of self organization and intelligence emergence. Data mining, if integrated into agent systems, can greatly enhance the learning skills of agents, and assist agents with predication of future states, thus initiating follow up action or intervention. The data mining community is now struggling with mining distributed, interactive and heterogeneous data sources. Agents can be used to manage such data sources for data access, monitoring, integration, and pattern merging from the infrastructure, gateway, message passing and pattern delivery perspectives. These two examples

illustrate the potential of agent mining in handling challenges in respective communities. There is an excellent opportunity to create innovative, dual agent mining interaction and integration technology, tools and systems which will deliver results in one new technology. overview of selected topics that are of interest to older tax-payers. Evidence indicates that actions within four main themes (early child development, fair employment and decent work, social protection, and the living environment) are likely to have the greatest impact on the social determinants of health and health inequities. A systematic search and analysis of recommendations and policy guidelines from intergovernmental organizations and international bodies identified practical policy options for action on social determinants within these four themes. Policy options focused on early childhood education and care; child poverty; investment strategies for an inclusive economy; active labour market programmes; working conditions; social cash transfers; affordable housing; and planning and regulatory mechanisms to improve air quality and mitigate climate change. Applying combinations of these policy options alongside effective governance for health equity should enable WHO European Region Member States to reduce health inequities and synergize efforts to achieve the United Nations Sustainable Development Goals.

UCLG's Third Global Report on Local Democracy and Decentralization (GOLD III) examines basic service provision and the current state-of-play of the local governance of basic services around the world. Basic Services for All in an Urbanizing World examines the enormous challenge of ensuring the universal provision of basic services in a world that is being shaped by rapid global urbanization, climate change, and economic, social and technological transformation. The world's urban population is predicted to reach 5 billion people within the next 20-30 years. The report analyses the conditions necessary for local governments to provide these new urban residents with quality basic services. Water, sanitation, waste management, transport and energy are essential, not only for the preservation of human life and dignity, but also in driving economic growth and ensuring social equality. Each chapter examines a world region, drawing on existing research and consultation with local authorities on the ground. The chapters review access levels, legal and institutional frameworks, and the different ways in which basic services are managed and financed, as well as

showcasing diverse examples of innovation in the local and multi-level governance of services. It concludes with a set of recommendations for all stakeholders with a view to making the goal of basic services for all a reality. This report contributes to discussions on the Millennium Development Goals and the UN Post-2015 Development Agenda. The findings of GOLD III will also be essential to promoting the vision of local governments at the 2016 UN Conference on Human Settlements (Habitat III).

Nutrient Use Efficiency in Plants: Concepts and Approaches is the ninth volume in the Plant Ecophysiology series. It presents a broad overview of topics related to improvement of nutrient use efficiency of crops. Nutrient use efficiency (NUE) is a measure of how well plants use the available mineral nutrients. It can be defined as yield (biomass) per unit input (fertilizer, nutrient content). NUE is a complex trait: it depends on the ability to take up the nutrients from the soil, but also on transport, storage, mobilization, usage within the plant, and even on the environment. NUE is of particular interest as a major target for crop improvement. Improvement of NUE is an essential pre-requisite for expansion of crop production into marginal lands with low nutrient availability but also a way to reduce use of inorganic fertilizer.

This volume addresses an important aspect of Brexit that has been ever-present in public debates, but has so far not received corresponding attention by academic scholars, namely the role of parliaments and citizens in this process. To address this gap, this book brings together an international group of authors who provide a comprehensive and multidisciplinary treatment of this subject. Specifically, the contributors, scholars from the UK and across Europe, provide diverse accounts of the role of regional, national and European parliaments and citizens from the perspectives of Law, Political Science and European Studies. The book

is structured in three parts focused on developments, respectively, in the UK, in the parliaments of the EU27, and at the EU level. Beyond providing a comprehensive examination of the scrutiny of Brexit, the book utilises the insights gained from this experience for a study of executive-legislative relations in the European Union more generally, examining the balance, or lack thereof, between governments and parliaments. In this way, the book also speaks to some of the long-lasting, indeed perennial questions about the effects of constitutional provisions and political practice in the context of European democracy.

Chicago Music City, a first-of-its kind study conducted by the Cultural Policy Center at the University of Chicago, compares the strength and vitality of music industries and scenes across the United States, and finds that Chicago is a leader by nearly each indicator measured. As cities across the United States vie with each other to attract and retain business, sociologists, urban planners, and real estate developers point to quality of life and availability of cultural amenities as important indicators of the health and future success of urban areas. A number of these cities are turning to economic impact studies to show the importance of the music to the local economies. Chicago Music City compares Chicago's musical strength with the 50 largest metropolitan areas in the U. S., focusing especially on a group of eleven comparison cities: Chicago and its demographic peers, New York and Los Angeles, plus eight others with strong musical reputations ; Atlanta, Austin, Boston, Las Vegas, Memphis, Nashville, New Orleans and Seattle. Initially intended to serve as a benchmark for measuring the future growth of the Chicago's music community, Chicago Music City offers a new twist on the economic impact studies used by music industry and arts advocates across the country.
