Essential reading for business leaders and policymakers, an in-depth investigation of red teaming, the practice of inhabiting the perspective of potential competitors to gain a strategic advantage Red teaming. The concept is as old as the Devil's Advocate, the eleventh-century Vatican official charged with discrediting candidates for sainthood. Today, red teams are used widely in both the public and the private sector by those seeking to better understand the interests, intentions, and capabilities of institutional rivals. In the right circumstances, red teams can yield impressive results, giving businesses an edge over their competition, poking holes in vital intelligence estimates, and troubleshooting dangerous military missions long before boots are on the ground. But not all red teams are created equal; indeed, some cause more damage than they prevent. Drawing on a fascinating range of case studies, Red Team shows not only how to create and empower red teams, but also what to do with the information they produce. In this vivid, deeply-informed account, national security expert Micah Zenko provides the definitive book on this important strategy -- full of vital insights for decision makers of all kinds.

This extraordinary book explains the engine that has catapulted the Internet from backwater to ubiquity—and reveals that it is sputtering precisely because of its runaway success. With the unwitting help of its users, the generative Internet is on a path to a lockdown, ending its cycle of innovation—and facilitating unsettling new kinds of control. iPods, iPhones, Xboxes, and TiVos represent the first wave of Internet-centered products that can't be easily modified by anyone except their vendors or selected partners. These “tethered appliances” have already been used in remarkable but little-known ways: car GPS systems have been reconfigured at the demand of law enforcement to eavesdrop on the occupants at all times, and digital video recorders have been ordered to self-destruct thanks to a lawsuit against the manufacturer thousands of miles away. New Web 2.0 platforms like Google mash-ups and Facebook are rightly touted—but their applications can be similarly monitored and eliminated from a central source. As tethered appliances and applications eclipse the PC, the very nature of the Internet—its “generativity,” or innovative character—is at risk. The Internet's current trajectory is one of lost opportunity. Its salvation, Zittrain argues, lies in the hands of its millions of users. Drawing on generative technologies like Wikipedia that have so far survived their own successes, this book shows how to develop new technologies and social structures that allow users to work creatively and collaboratively, participate in solutions, and become true “netizens.”

Provides instruction on building Android apps, including solutions to working with web services, multitouch gestures, location awareness, and device features.

A new breed of investing that combines making more money and making a difference. First there were the "Profiteers," investors who sought to make money regardless of the cost to society. Then came the "Do-Gooders," investors who avoided "bad" companies and supported "good" ones, based on philosophy over financials. Now this book introduces a brand new breed of investor: The HIP Investor. Written for those who want to profit handsomely while also building a better world, it will help you discover companies that are boosting the bottom line by solving key human needs through innovative products and services—benefiting customers, engaging employees, and delivering sustainable, profitable growth for their investors. That's the Human Impact + Profit, or HIP, approach. In *The HIP Investor*, R. Paul Herman—creator of the HIP methodology—introduces a revolutionary system that allows investors to profit and make a positive impact. It values measurable results over policies and philosophies, and shows how higher-performing companies can deliver both human impact and profit for shareholders. This book provides a compelling, easy to use "investor tool-kit" so you can quickly "HIP" your portfolio. Reveals the three questions you should ask when looking for a company to invest in. Illustrates how world problems can be solved for profit by companies and investors making informed decisions. You can make money while making a difference, and *The HIP Investor* is here to show you how.
