From beach encounters, aquaculture perils, and processed-food poisoning to snake bites and biological warfare, natural toxins seem never to be far from the public's sight. A better understanding of toxins in terms of their origin, structure, structure-function relationships, mechanism of action, and detection and diagnosis is of utmost importance to human and animal food safety, nutrition, and health. In addition, it is now clear that many of the toxins can be used as scientific tools to explore the molecular mechanism of several biological processes, be it a mechanism involved in the function of membrane channels, exocytosis, or cytotoxicity. Several of the natural toxins have also been approved as therapeutic drugs, which has made them of interest to

several pharmaceutical companies. For example, botulinum neurotoxins, which have been used in studies in the field of neurobiology, have also been used directly as therapeutic drugs against several neuromuscular diseases, such as strabismus and blepharospasm. Toxins in combination with modern biotechnological approaches are also being investigated for their potential use against certain deadly medical problems. For example, a combination of plant toxin ricin and antibodies is being developed for the treatment of tumors. The great potential of natural toxins has attracted scientists of varying backgrounds-pure chemists to cancer biologists-to the study of fundamental aspects of the actions of these toxins.

Both hardware and software aspects are addressed, making this book an essential guide for engineers in any environment where safety and reliability are critical factors. Control and instrumentation systems are increasingly used in situations where failure can involve a serious risk to life and property. Reliability is therefore a key attribute of these systems. The ways in which these systems have developed, methods for estimating reliability, and the relation between the performance of a complete system and its component parts are discussed in this extensive review. Examples of high-reliability systems in aircraft, nuclear installations and data handling are included. Both hardware and software aspects are addressed, making this book an essential guide for engineers in any environment where safety and reliability are critical factors. The author was formerly senior lecturer in the department of electrical and electronic engineering at Birmingham University, UK, and has written a number of books on microprocessors and systems, including 'Electronic Equipment Reliability' and 'Transducers for Microprocessor Systems'.

One problem with helicoptering is that there are virtually no flying clubs, at least of the sort that exist for fixed wing, so pilots get very little chance to swap stories, unless they meet in a muddy field somewhere, waiting for their passengers. As a result, the same mistakes are being made and the same lessons learnt separately instead of being shared - it's comforting sometimes to know that you're not the only one to inflate the floats by accident! Even when you do get into a school, there are still a couple of things they don't teach you, namely that aviation runs on paperwork, and how to get a job, including interview techniques, etc - flying the aircraft is actually less than a third of the job. Another is that nobody really tells you anything, either about the job you have to do (from the customer) or how to do it (the company) - you will always be up against the other guy who managed to do it last week! Sure, there will be training, but, even in the best companies, this will be relatively minimal. This book is an attempt to correct the above situations by gathering together as much information as possible for helicopter pilots, old and new, professional and otherwise, in an attempt to explain the why, so the how will become easier (you will be so much more useful if you know what the customer is trying to achieve). In short, this is all the stuff nobody taught me - every tip and trick I have learnt has been included.

"Making Groceries" - Makin' Groceries is a New Orleans term that, simply put, means going to the grocery store to buy or purchase groceries. Ask any stranger what they think of when you mention "New Orleans" and more often than not "the food" is the first thing that they rave about. Making Groceries is just the beginning of the journey though... to really experience the food means experiencing the meaning behind the food. Many of these recipes were shared during family get-together's and special events where everyone brings their best dish. As you browse through the pictures and short stories you fall in love with food, family, and friends. This is not your "generic" variety cookbook...this is a legacy of love, and cultural expression, passed down through generations, that choose to defy the limits of recipes or ethnicity.

All previous Biblical Hebrew lexicons have provided a modern western definition and perspective to Hebrew roots and words. This prevents the reader of the Bible from seeing the ancient authors' original intent of the passages. This is the first Biblical Hebrew lexicon that defines each Hebrew word within its original Ancient Hebrew cultural meaning. One of the major differences between the Modern Western mind and the Ancient Hebrew's is that their mind related all words and their meanings to a concrete concept. For instance, the Hebrew word "chai" is normally translated as "life", a western abstract meaning, but the original Hebrew concrete meaning of this word is the "stomach". In the Ancient Hebrew mind, a full stomach is a sign of a full "life". The Hebrew language is a root system oriented language and the lexicon is divided into sections reflecting this root system. Each word of the Hebrew Bible is grouped within its roots and is defined according to its original ancient cultural meaning. Also included in each word entry are its alternative spellings, King
