Innovations in Educational Leadership and Continuous Teachers' Professional Development
CSMFL Publications

This book examines the dark odyssey of official and private collective violence against the rural African population and Africans in general during the two generations before apartheid became the primary justification for the existence of the South African state. John Higginson discusses how Africans fought back against the entire spectrum of violence ranged against them, demonstrating just how contingent apartheid was on the struggle to hijack the future of the African majority.

Insights and Innovations in Structural Engineering, Mechanics and Computation comprises 360 papers that were presented at the Sixth International Conference on Structural Engineering, Mechanics and Computation (SEMC 2016, Cape Town, South Africa, 5-7 September 2016). The papers reflect the broad scope of the SEMC conferences, and cover a wide range of engineering structures (buildings, bridges, towers, roofs, foundations, offshore structures, tunnels, dams, vessels, vehicles and machinery) and engineering materials (steel, aluminium, concrete, masonry, timber, glass, polymers, composites, laminates, smart materials). Some contributions present the latest insights and new understanding on (i) the mechanics of structures and systems (dynamics, vibration, seismic response, instability, buckling, soil-structure interaction), and (ii) the mechanics of materials and fluids (elasticity, plasticity, fluid-structure interaction, flow through porous media, biomechanics, fracture, fatigue, bond, creep, shrinkage). Other contributions report on (iii) recent advances in computational modelling and testing (numerical simulations, finite-element modeling, experimental testing), and (iv) developments and innovations in structural engineering (planning, analysis, design, construction, assembly, maintenance, repair and retrofitting of structures). Insights and Innovations in Structural Engineering, Mechanics and Computation is particularly of interest to civil, structural, mechanical, marine and aerospace engineers. Researchers, developers, practitioners and academics in these disciplines will find the content useful. Short versions of the papers, intended to be concise but self-contained summaries of the full papers, are collected in the book, while the full versions of the papers are on the accompanying CD.

A 2nd vol. for 1914 contains debates of an extraordinary session and the Assembly Debates are also included.

This edited book offers an updated insight into a number of key elements of educational leadership and teachers' professional development topics. The authors believe this book will be of great help and interest to a wide range of readers: policy makers, researchers, school leaders, teachers, under-graduate and post graduate students.

A study of the period in South African history between the wars, when the modern system of labour control was developed. It includes chapters on the regulation of working conditions, health and welfare, wage regulation and the state's efforts to control African trade unions.
