This book is intended for students, leaders and managers who wish to explore the personal relevance and conceptual bases of educational leadership and organizational management and to develop their expertise in this field. It is a book written for both scholars and practitioners. The general public will also appreciate the accessible language in the book. There are two goals in the experiential learning process. One is to learn the specifics of a particular subject matter, in this case, educational leadership and organizational management. The other is to learn about one's own strengths and weaknesses as a learner. This book is focused on the analysis of prevalent theories and concepts and their application to the development of leadership and management skills, and the knowledge and attitudes required to solve real world problems in the workplace. For decades, students have focused their studies of educational leadership and organizational management theories in classroom settings without actual opportunities to apply these theories in the workplace. A profound and significant lesson learned in history is that we must follow the principle of integrating theory with practice (unity of theory with practice). Then, we can follow the policy of walking on two legs, an analogy made by the late Chinese chairman, Mao Ze Dong.

Risk is the main source of uncertainty for investors, debtholders, corporate managers and other stakeholders. For all these actors, it is vital to focus on identifying and managing risk before making decisions. The success of their businesses depends on the relevance of their decisions and consequently, on their ability to manage and deal with the different types of risk.

Accordingly, the main objective of this book is to promote scientific research in the different areas of risk management, aiming at being transversal and dealing with different aspects of risk management related to corporate finance as well as market finance. Thus, this book should provide useful insights for academics as well as professionals to better understand and assess the different types of risk.

The examples also emphasize current examples in order to help accountants make the connection to their everyday lives.

Almost all economists, whether classical, neoclassical or Marxist, have failed in their analyses of capitalism to take into account the underpinning systems of accounting. This book draws attention to this lacuna, focusing specifically on the concept of capital: a major concept that dominates all teaching and practice in both economics and management. It is argued that while for the practitioners of capitalism – in accounting and business – the capital in their accounts is a debt to be repaid (or a thing to be kept), for economists it has been considered a means (or even a resource or an asset) intended to be worn out. This category error has led to economists failing to comprehend the true nature of capitalism. On this basis, this book proposes a new

definition of capitalism that brings about considerable changes in the attitude to be had towards this economic system, in particular the means to bring about its replacement. This book will be of significant interest to readers to political economy, history of economic thought, critical accounting and heterodox economics.

Accounting is the discipline with the oldest historical culture, being the first to be recognized by humanity when Adam and Eve were made to account for what they did in paradise. It is also the only discipline that will come into play in the Hereafter, where everybody would be raised up as an accountant - to account for all they have done during their life time on earth! Accounting is a service-providing discipline, with a rich theoretical background, which makes available information (especially financial) to guide various decision-making processes. Business owners, creditors, managers, prospective investors, government and its agencies, employees and even the general public seek accounting information to guide them when taking various informed decisions about reporting entities and the environment within which they operate. This book addresses the historical accounting culture, its theories as well as its practices. It is made up of fifteen chapters, covering various historical, theoretical and practical aspects of Accounting, ranging from accounting standardization to financial reporting. The book is an attempt to address some of the lacunae in advanced accounting issues, both in theory and in practice. Students of advanced accounting theory and practice at the professional and academic levels in Universities, Polytechnics and Professional Institutes would find the book an essential companion.

The increasing pace of global conformance towards the adoption of International Financial Reporting Standards (IFRS) highlights the need for accounting students as well as accounting practitioners to be conversant with IFRS. Teaching IFRS offers expert descriptions of, and insights into, the IFRS convergence process from a teaching and learning perspective. Hence this book is both timely and likely to have considerable impact in providing guidance for those who teach financial reporting around the world. The contents of the book come from authoritative sources and offer something distinctive to complement the existing textbooks which typically focus on the technical aspects of IFRS and their adoption. Drawing upon the experiences of those who have sought to introduce IFRS-related classroom innovations and the associated student outcomes achieved therefrom, the book offers suggestions about how to design and deliver courses dealing with IFRS and catalogues extensive listings of IFRS-related teaching resources to support those courses. This book was originally published as a special issue of Accounting Education: An international journal.

Engineering managers and professionals make a long and lasting impact in the industry by regularly developing technology-based projects, as related to new product development, new service innovation or efficiency-centered process improvement, or both—to create strategic differentiation and operational excellence for their employers. This book consists of three sets of business fundamentals. The chapter “Cost Accounting and Control” discusses service and product costing, activity-based costing to define overhead expenses, and risk analysis and cost estimation under uncertainty. The chapter “Financial Accounting and Analysis” delineates the key financial statements, financial analyses, balanced scorecard, ratio analysis, and capital asset valuation—including operations, opportunities, and acquisition and mergers. The chapter “Marketing Management” reviews marketing functions, marketing forecasting, marketing segmentation, customers, and other factors affecting marketing in making value-adding contributions. The new business vocabulary and useful analysis tools presented will enable engineering managers to become more effective when interacting with senior management, and to prepare themselves for assuming higher-level corporate responsibilities.

This book provides a comprehensive and critical overview of learning accounting. It illustrates that when learners need to mentally integrate two or more distinct items of information, it places unnecessary demands on cognitive load. The book discusses the cognitive load theory, which assumes that the task of mental integration increases the load on already limited working memory, and it does so to such an extent that learning may be severely impeded. The book also investigates how students could deal with cognitive overload when learning introductory accounting using three instructional design formats: the split-attention format, the integrated format, and the self-managed format. This collection explores Kuhn's 1970 perception of a scientific revolution in the form of a cyclical sequence of anomaly recognition; insecurity, alternative ideas, schools of thought and dominating practices. Cash flow reporting has become a dominant accounting practice which emerged from a developmental process of Kuhnian form. The text is constructed around the various stages identified by Kuhn and selected readings are categorised accordingly.

Much has been written about the economic and political problems of countries that are in the process of changing from centrally planned systems to market systems. Most studies have focused on the economic, legal, political and sociological problems these economies have had to face during the transition period. However, not much has been written about the dramatic changes that have to be made to the accounting and financial system of a transition economy. This book was written to help fill that gap. This book is the second in a series to examine accounting and financial system reform in transition economies. The first book used Russia as a case study. The present volume in the series examines some additional aspects of the reform in Russia and also looks at the accounting and financial system reform efforts that are being made in Ukraine, Bosnia & Herzegovina, Armenia and five Central Asian republics.
