Professor Dr. Mortiz-Maria von Igelfeld of the Institute at Regensburg. Unnaturally tall, hypersensitive to slights, and oblivious to his own frequent gaucheries, von Igelfeld is engaged in a never-ending quest to win the respect he knows is due him. Portuguese Irregular Verbs follows the Professor from a busman's holiday researching old Irish obscenities to a flirtation with a desirable lady dentist. In *The Finer Points of Sausage Dogs*, von Igelfeld practices veterinary medicine without a license, transports relics for a schismatically challenged Coptic prelate and is mobbed by marriage-minded widows on board a Mediterranean cruise ship. In *At the Villa of Reduced Circumstances*, the final novel in the trilogy, we find our hero suffering the slings of academic intrigue as a visiting fellow at Cambridge, and the slings of outrageous fortune in an eventful Columbian adventure.

"A Christmas Carol. In Prose. Being a Ghost Story of Christmas, commonly known as *A Christmas Carol*, is a novella by Charles Dickens, first published in London by Chapman & Hall in 1843 and illustrated by John Leech. *A Christmas Carol* recounts the story of Ebenezer Scrooge, an elderly miser who is visited by the ghost of his former business partner Jacob Marley and the spirits of Christmas Past, Present and Yet to Come. After their visits, Scrooge is transformed into a kinder, gentler man. Dickens wrote *A Christmas Carol* during a period

when the British were exploring and re-evaluating past Christmas traditions, including carols and newer customs such as Christmas trees. He was influenced by the experiences of his own youth and by the Christmas stories of other authors including Washington Irving and Douglas Jerrold. Dickens had written three Christmas stories prior to the novella, and was inspired following a visit to the Field Lane Ragged School, one of several establishments for London's street children. The treatment of the poor and the ability of a selfish man to redeem himself by transforming into a more sympathetic character are the key themes of the story. There is discussion among academics as to whether this was a fully secular story, or if it is a Christian allegory."

This book is concerned with the structure of linear semigroups, that is, subsemigroups of the multiplicative semigroup $M_n(K)$ of $n \times n$ matrices over a field K (or, more generally, skew linear semigroups — if K is allowed to be a division ring) and its applications to certain problems on associative algebras, semigroups and linear representations. It is motivated by several recent developments in the area of linear semigroups and their applications. It summarizes the state of knowledge in this area, presenting the results for the first time in a unified

form. The book's point of departure is a structure theorem, which allows the use of powerful techniques of linear groups. Certain aspects of a combinatorial nature, connections with the theory of linear representations and applications to various problems on associative algebras are also discussed.

Reframing difference is the first major study of two overlapping strands of contemporary French cinema, cinema beur (films by young directors of Maghrebi immigrant origin) and cinema de banlieue (films set in France's disadvantaged outer-city estates). Carrie Tarr's insightful account draws on a wide range of films, from directors such as Mehdi Charef, Mathieu Kassovitz and Djamel Bensalah. Her analyses compare the work of male and female, majority and minority film-makers, and emphasise the significance of authorship in the representation of gender and ethnicity. Foregrounding such issues as the quest for identity, the negotiation of space and the recourse to memory and history, she argues that these films challenge and reframe the symbolic spaces of French culture, addressing issues of ethnicity and difference which are central to today's debates about what it means to be French. This timely book is essential reading for anyone interested in the relationship between cinema and citizenship in a multicultural society.

This book had its nucleus in some lectures given by one of us (J. O'M. B.) in a course on electrochemistry to students of energy conversion at the University of Pennsylvania. It was there that he met a number of people trained in chemistry, physics, biology, metallurgy, and materials science, all of whom wanted to know something about electrochemistry. The concept of writing a book about electrochemistry which could be understood by people with very varied backgrounds was thereby engendered. The lectures were recorded and written up by Dr. Klaus Muller as a 293-page manuscript. At a later stage, A. K. N. R. joined the effort; it was decided to make a fresh start and to write a much more comprehensive text. Of methods for direct energy conversion, the electrochemical one is the most advanced and seems the most likely to become of considerable practical importance. Thus, conversion to electrochemically powered transportation systems appears to be an important step by means of which the difficulties of air pollution and the effects of an increasing concentration in the atmosphere of carbon dioxide may be met. Corrosion is recognized as having an electrochemical basis. The synthesis of nylon now

contains an important electrochemical stage. Some central biological mechanisms have been shown to take place by means of electrochemical reactions. A number of American organizations have recently recommended greatly increased activity in training and research in electrochemistry at universities in the United States. The adoption of the Bill of Rights in 1791 marked the creation of a uniquely innovative mechanism for constitutional change by which Americans have continued to renew and redefine their governance over a two-hundred-year period. Now, in time for the bicentennial celebration of this great document, seven distinguished scholars combine their expertise to explore the history and contemporary meaning of these first ten amendments to the Constitution.
